Summary 20220527:

REPORTED DEATHS:

Reported daily deaths are increasing in *Alberta* and *British Columbia*.

The current level of reported daily deaths at the national level has been around 70 since mid-April, composed of declining daily deaths in Ontario of Quebec, and rising daily deaths in Alberta and British Columbia. This high level of reported daily deaths since mid-April was seen only during the first wave of omicron (January 2022), the second national wave in winter 2021, and the first national wave spring 2000. In short, daily deaths are high.

PREDICTED DEATHS:

The SRIV model predicts rise in daily deaths at the national level starting from July 2022, with levels short of 200 in late August.

NEXT-DEMICS:

NEXT-DEMICS:

(1) **MONKEY POX**: Status uncertain.

(2) **FOOD SCARCITY** and malnutrition plus **WATER SCARCITY** and **WEATHER CALAMITIES** (environmental degradation, global warming) culminate in epidemics of nutritional, infectious, and non-communicable diseases in many countries, probably resulting in a new pandemic.
