## Executive Summary

This report shows the trajectory of daily deaths, infections, bed needs, and ICU bed needs for Canada and its provinces, estimated by five international and periodically updating COVID-19 epidemic models.

**The graphs** (see the following pages) show the predictions for *when, where, and how much* increase/decrease in infections, deaths, and bed needs.

This report summarizes the results of a project named *CovidVisualizedCountry*, an online tool developed to function as an early warning tool for technical advisers and health decision-makers.

Pre-print Data Note manuscript on Research Square, titled “CovidVisualized: Visualized compilation of international updating models’ estimates of COVID-19 pandemic at global and country levels”, 02 August 2021, PRE-PRINT (Version 1) available at Research Square [<https://doi.org/10.21203/rs.3.rs-768714/v1>] describes the methods and results of CovidVisualized tools: [\*CovidVisualizedCountry\* \(for Canada\)](#), [\*CovidVisualizedGlobal\* \(for global level\)](#), and [\*covir2\* \(for Iran\)](#).

Farshad Pourmalek MD MPH PhD, who has created the [\*CovidVisualizedCountry\*](#) tool (and [\*covir2\*](#) tool for Iran and [\*CovidVisualizedGlobal\*](#) tool for global level) and this report is a physician and epidemiologist who worked in the [School of Population and Public Health of University of British Columbia](#) and Vancouver General Hospital, [University of Washington](#), WHO, UNDEP, and UNICEF. ORCID ID <https://orcid.org/0000-0002-2134-0771>, PubMed.

## What is this report, and where does it come from?

This report is the **21st** situation report of predictions of five international and periodically updating COVID-19 epidemic models about the future trajectory of the epidemic in Canada and its provinces. The report is based on the “**CovidVisualizedCountry**” online tool, that is a GitHub repository for sharing data and codes, available at  
<https://github.com/pourmalek/CovidVisualizedCountry>

This report is meant to serve as an offline and stand-alone version of the online tool. Situation Reports are available online at

<https://github.com/pourmalek/CovidVisualizedCountry/tree/main/situation%20reports>

**Objectives** of the “CovidVisualizedCountry” tool are to identify international and periodically updated models of the COVID-19 epidemic, compile and visualize their estimation results, and regularly update the compilations.

The ultimate objective is to provide an ***early warning system*** for technical advisors to the decision-makers. When the predictions of one or more models show an increase in daily cases or infections, hospitalizations, or deaths in the near future of *one to three months*, ***technical advisors to the national and subnational decision-makers*** may consider suggesting augmentation of non-pharmacologic preventive interventions and vaccination. In doing so, the strengths and weaknesses of individual models need to be considered and those of this work. Models’ estimates demonstrate the trajectory of COVID-19 deaths, cases or infections, and hospital-related outcomes in one to three months into the future.

The “CovidVisualized” project includes <https://github.com/pourmalek/CovidVisualizedCountry> for Canada and its provinces, <https://github.com/pourmalek/covir2> for Iran, and <https://github.com/pourmalek/CovidVisualizedGlobal> for the global level.

**Methods and technical details** of this work are available in a pre-print Data Note manuscript on Research Square, titled “CovidVisualized: Visualized compilation of international updating models’ estimates of COVID-19 pandemic at global and country levels”, 02 August 2021, PRE-PRINT (Version 1) available at Research Square [<https://doi.org/10.21203/rs.3.rs-768714/v1>] describes the methods and results of CovidVisualized tools: ***CovidVisualizedCountry (for Canada)***, ***CovidVisualizedGlobal*** (for global level), and ***covir2*** (for Iran).

Strengths and weaknesses of international and periodically updating COVID-19 epidemic models are discussed in [Pourmalek F, Rezaei Hemami M, Janani L, Moradi-Lakeh M. Rapid review of COVID-19 epidemic estimation studies for Iran. BMC Public Health. 2021 Feb 1;21\(1\):257. doi: 10.1186/s12889-021-10183-3. PMID: 33522928.](https://doi.org/10.1186/s12889-021-10183-3)

Stata codes written and used for this whole work can be examined online and/or downloaded and re-run to check, securitize, verify, or flag any mistakes.

\*

**Models' updates** and their acquisition in this work:

Every Friday, a new uptake will be performed. Any model updates older than two weeks on the uptake date will not be included in the new uptake. The most recent update of each model is used.

The LANL COVID-19 Team made its last real-time forecast on September 27th, 2021. [for 20210926]. The LANL model is retired.

\*

**Uptakes** in <https://github.com/pourmalek/CovidVisualizedCountry> for Canada and its provinces are as follows.

(Uptake number) uptake date: study update date, study update date

***bold italic fonts*** show the uptake was triggered by either IHME or IMPE (before 20211008), or the model updates that are new in this uptake (20211008 and afterwards).

(37) uptake ***20211119: DELP 20211119, IHME 20211119, IMPE 20211115, SRIV 20211119***

## Graphs of epidemic trajectory in Canada and provinces till March 2022

Graphs of the most recent models' updates are shown here. These graphs, as well as graphs of previous updates, are available online at  
<https://github.com/pourmalek/CovidVisualizedCountry>

Logical order of graphs:

(1) *Location levels*: National level, followed by provinces for which estimations are available: Alberta, British Columbia, Manitoba, Nova Scotia, Ontario, Quebec, and Saskatchewan.

(2) *Outcomes*: Daily deaths, Daily cases or infections, Hospital-related outcomes, Daily deaths estimated to reported ratio, Daily cases or infections estimated to reported cases ratio. Followed by additional outcomes estimated by IHME and added starting from uptake 20210916, i.e., R effective, Daily Infection-outcome ratios, Daily mobility, Daily mask use, and (Percent) cumulative vaccinated.

(3) *Calendar time of estimates coverage*: All-time, followed by 2021. To view the whole epidemic trajectory and further focus on the near future.

(4) *Scenarios*: Reference scenarios, followed by alternative scenarios. To examine the main or reference (aka. status quo) scenario and alternative (better and worse) scenarios.

(5) *Five models*: Different models *within* each graph (for which model estimates update release dates are maximally synchronized), plus official reports of the country to WHO (curated by Johns Hopkins University) as the under-reported benchmark for trends. To examine how heterogeneity in methods used by different models results in heterogeneous results for the same outcome (same time-place-person aggregated units)

Among the five available international periodically updating studies or models of COVID-19 pandemic, only **TWO** studies, DELP and IHME, provide subnational level estimates for some countries. For Canada, they provide estimates for **SEVEN** provinces (AB, BC, MB, NS, ON, QC, SK).

The PHAC-McMaster model provides estimates of cases at the national and **SIX** provinces' levels (AB, BC, MB, ON, QC, SK) and cases hospitalized per 100 K population at the national level.

## Selected graphs - Newfoundland and Labrador

Newfoundland and Labrador only predicted in DELP model.

### (1) Newfoundland and Labrador [Daily deaths, reference scenarios, all time](#)

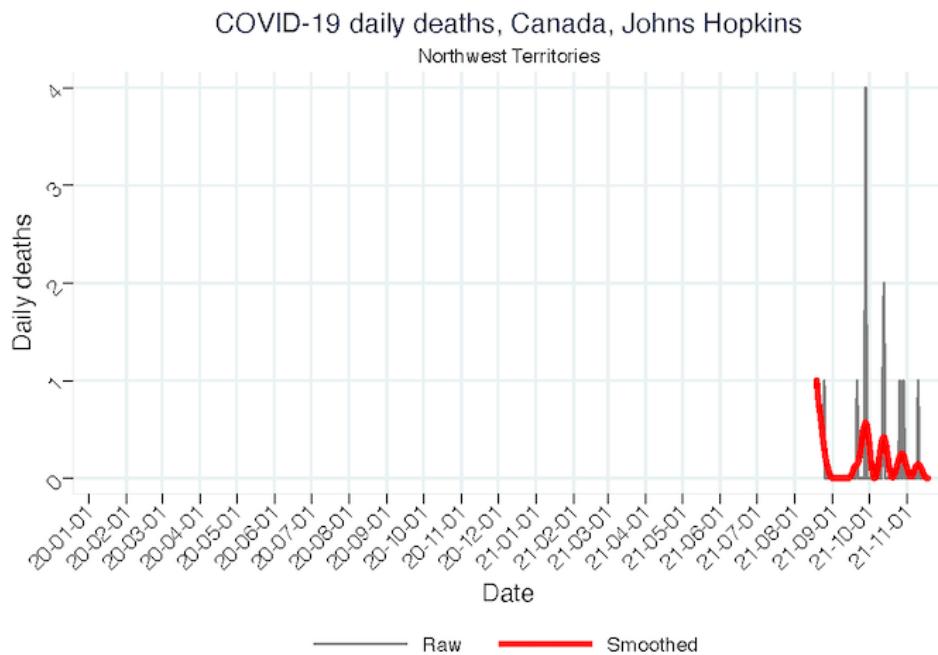

(2) Newfoundland and Labrador [Daily cases, reference scenarios, all time](#)

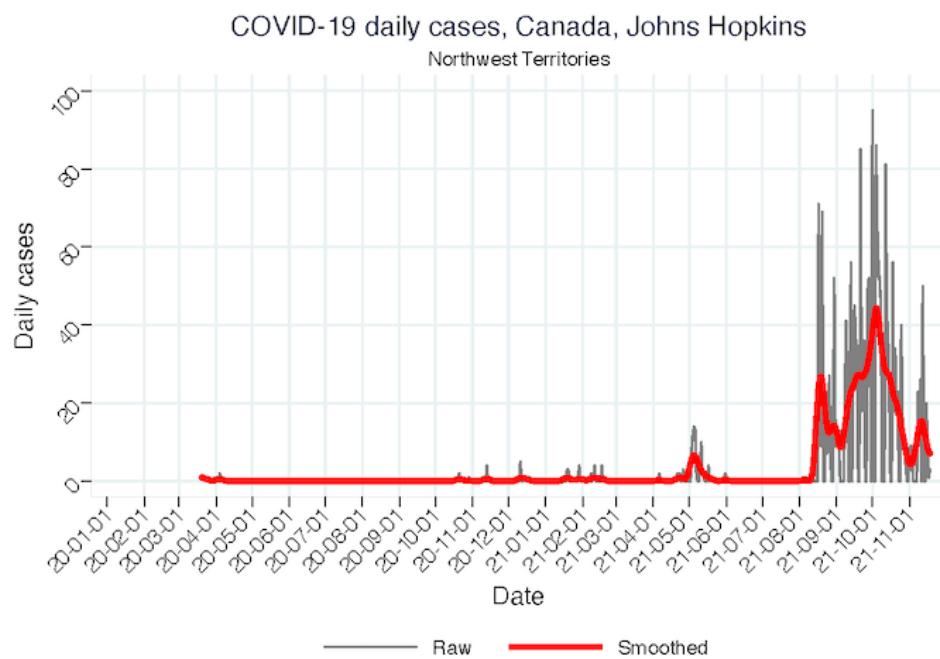

## Selected graphs - Northwest Territories

Northwest Territories predicted by none of the models. Reports to WHO available.

### (1) Northwest Territories [Daily deaths, reference scenarios, all time](#)

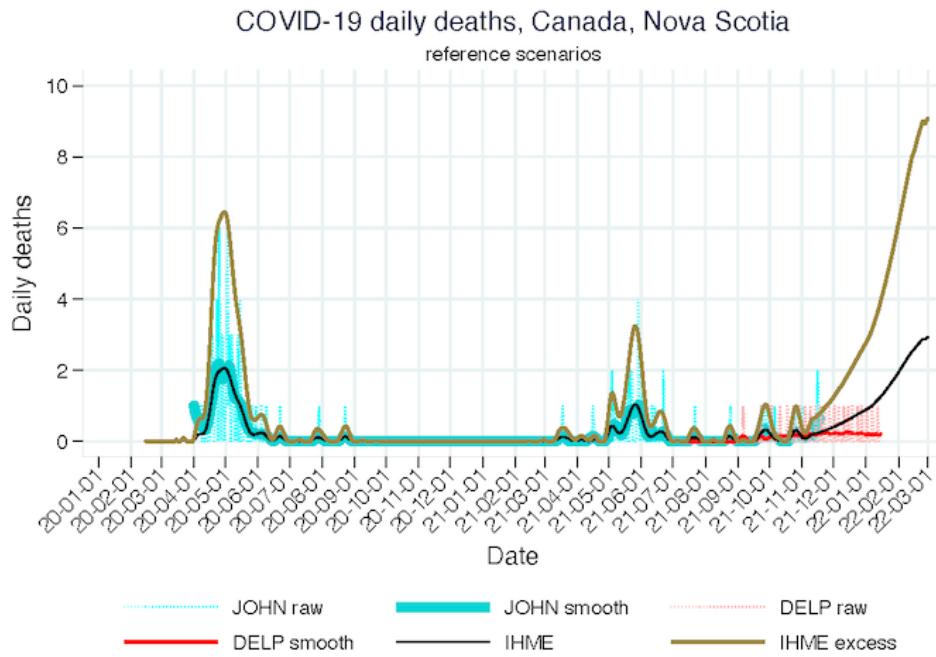

(2) Northwest Territories [Daily cases, reference scenarios, all time](#)

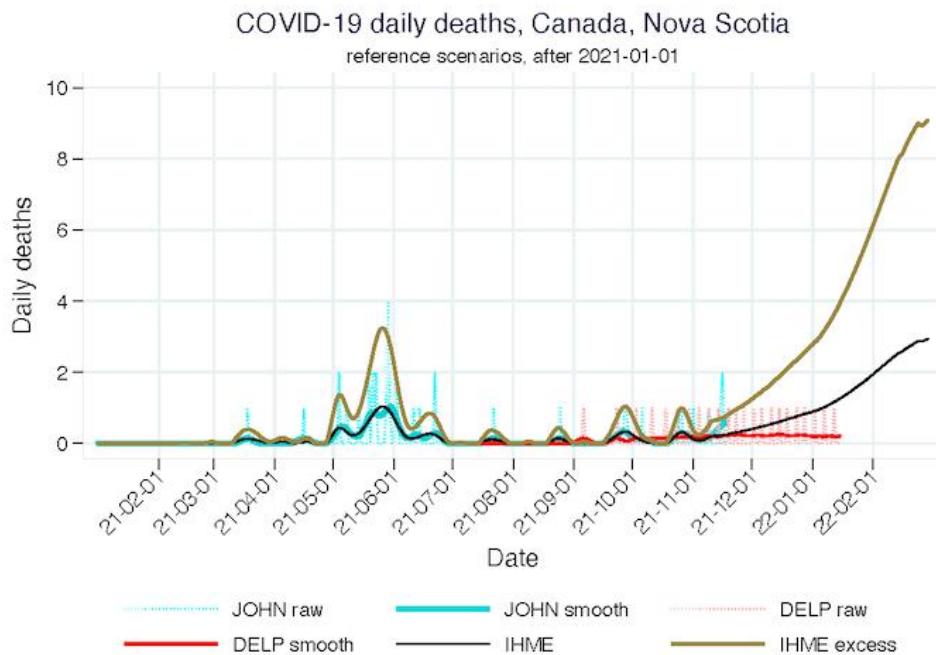

## Selected graphs - Nova Scotia

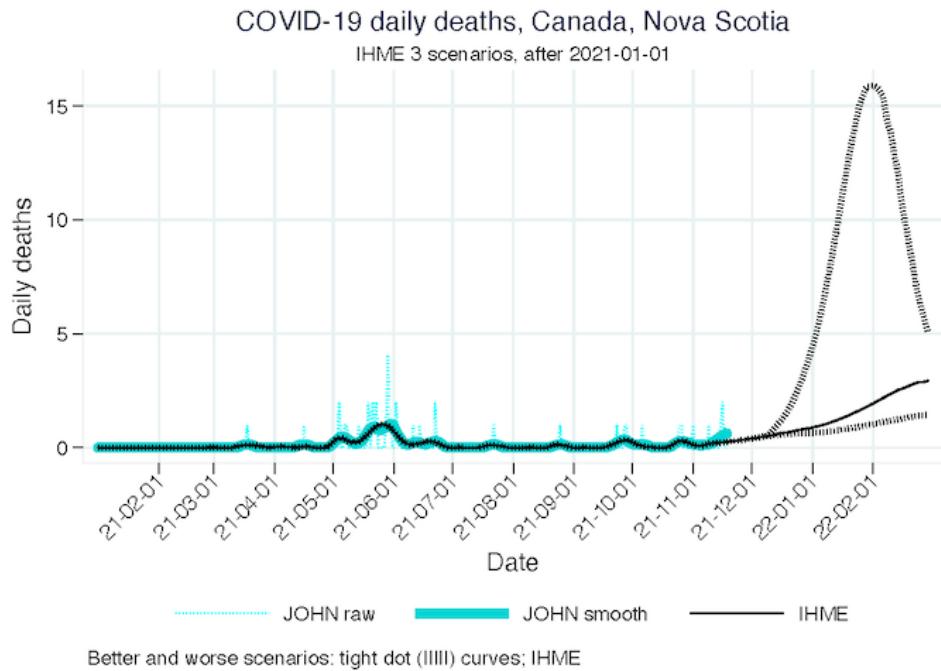

### (1) Nova Scotia [Daily deaths, reference scenarios, all time](#)

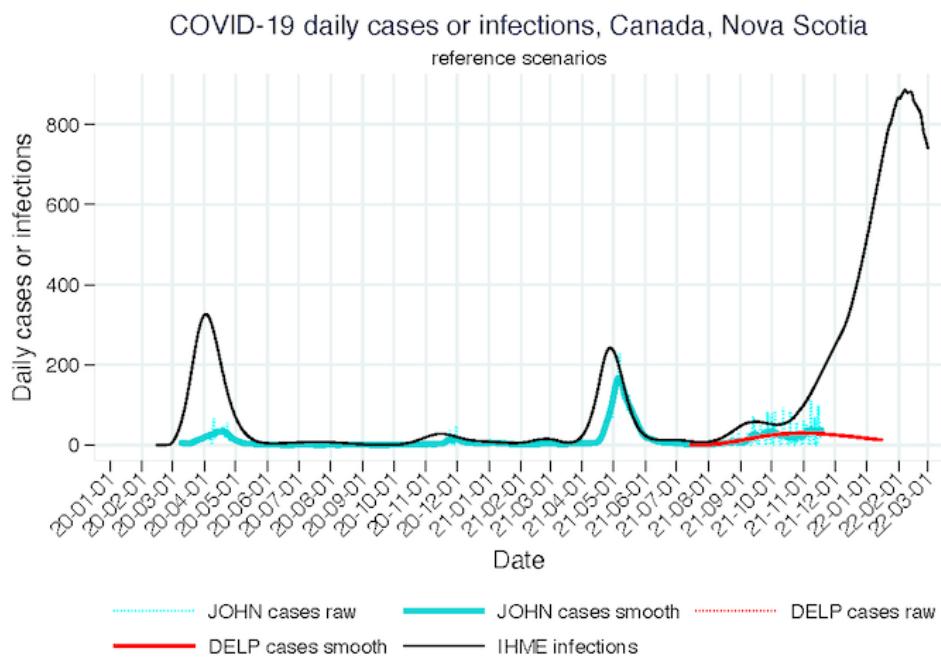

### (2) Nova Scotia [Daily deaths, reference scenarios, 2021](#)

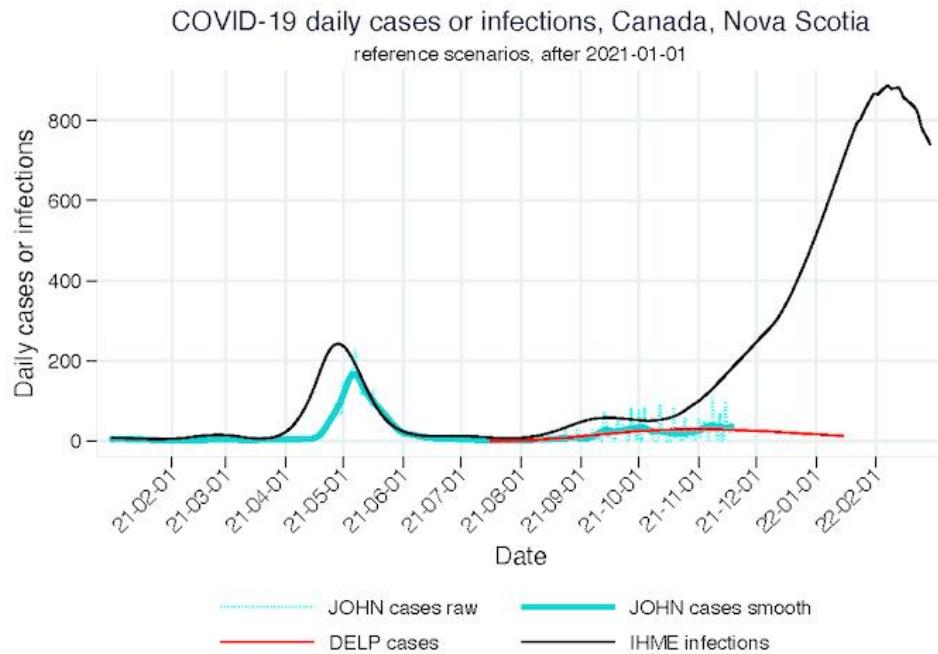

(3) Nova Scotia [Daily deaths, 3 scenarios, 2021](#)

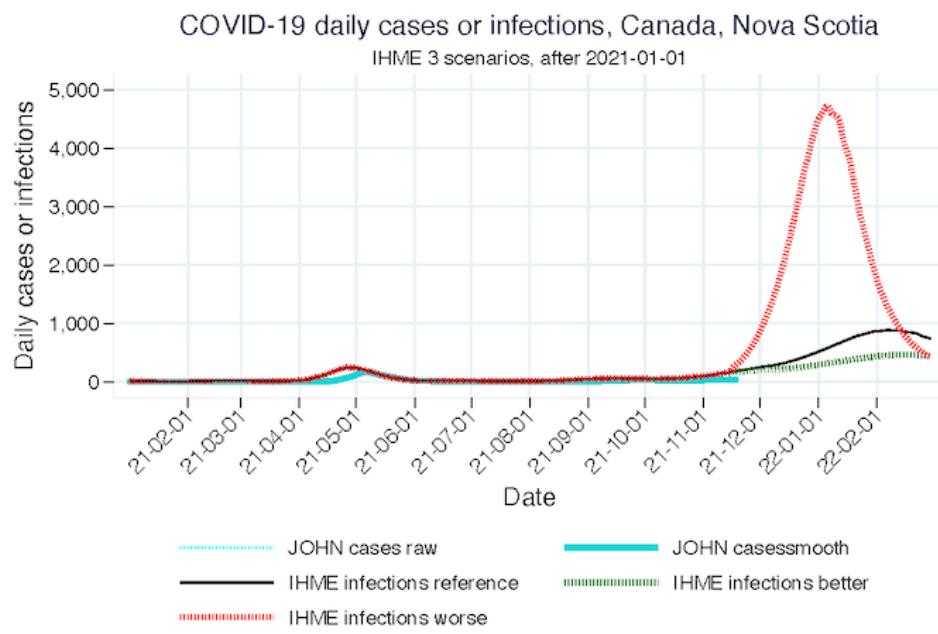

(4) Nova Scotia [Daily cases or infections, reference scenarios, all time](#)

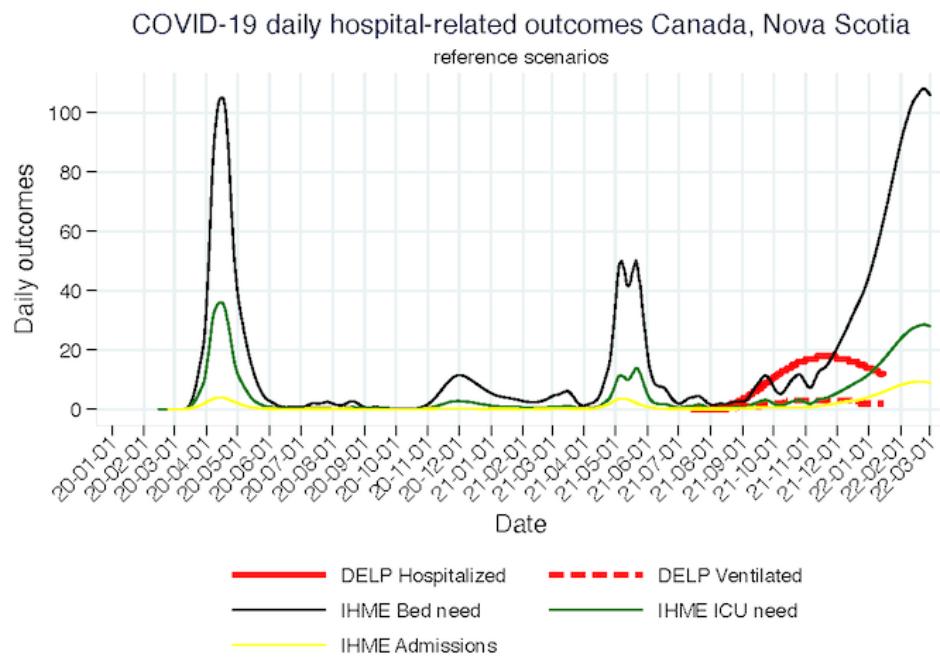

(5) Nova Scotia [Daily cases or infections, reference scenarios, 2021](#)

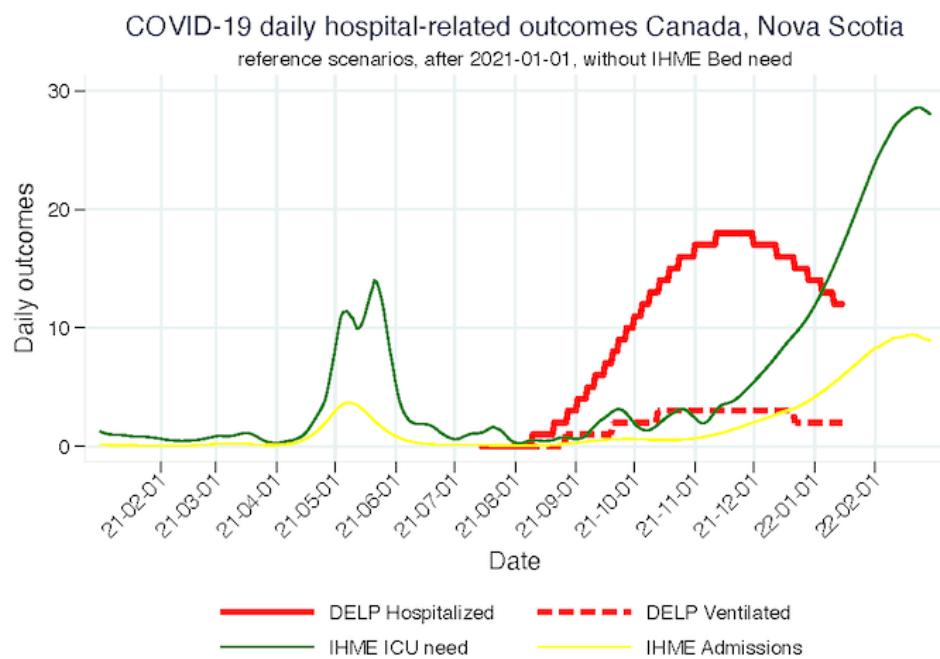

(6) Nova Scotia [Daily cases or infections, 3 scenarios, 2021](#)

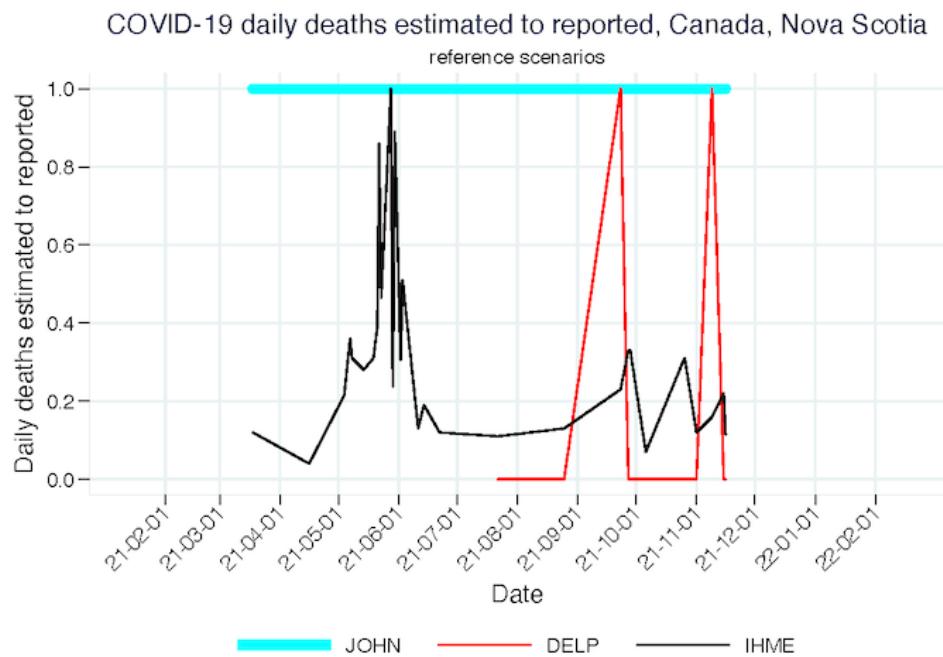

(7) Nova Scotia [Hospital-related outcomes, all time](#)

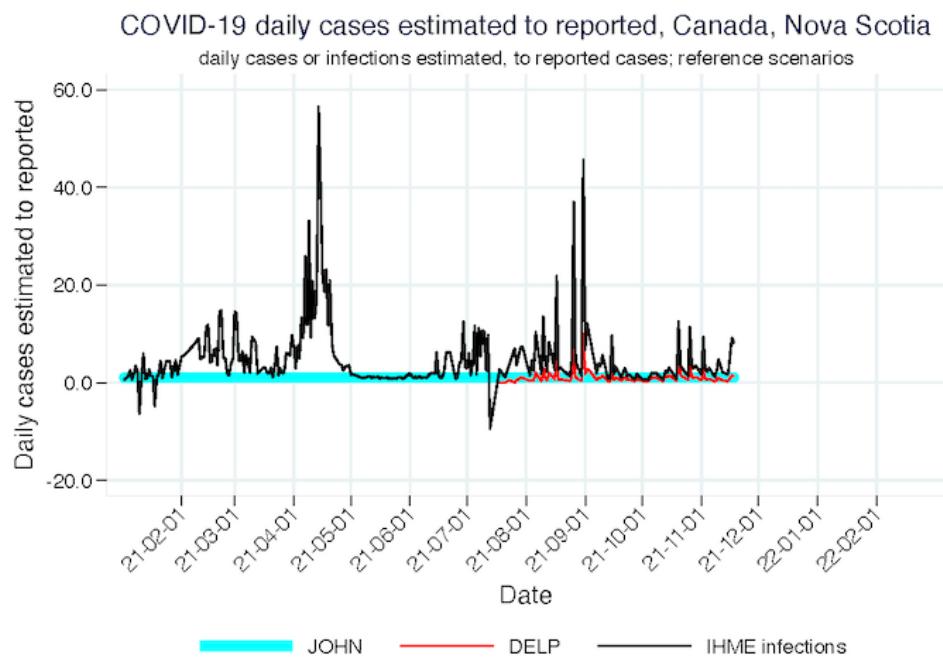

(8) Nova Scotia [Hospital-related outcomes, 2021, without IHME Bed need and IMPE Hospital demand](#)

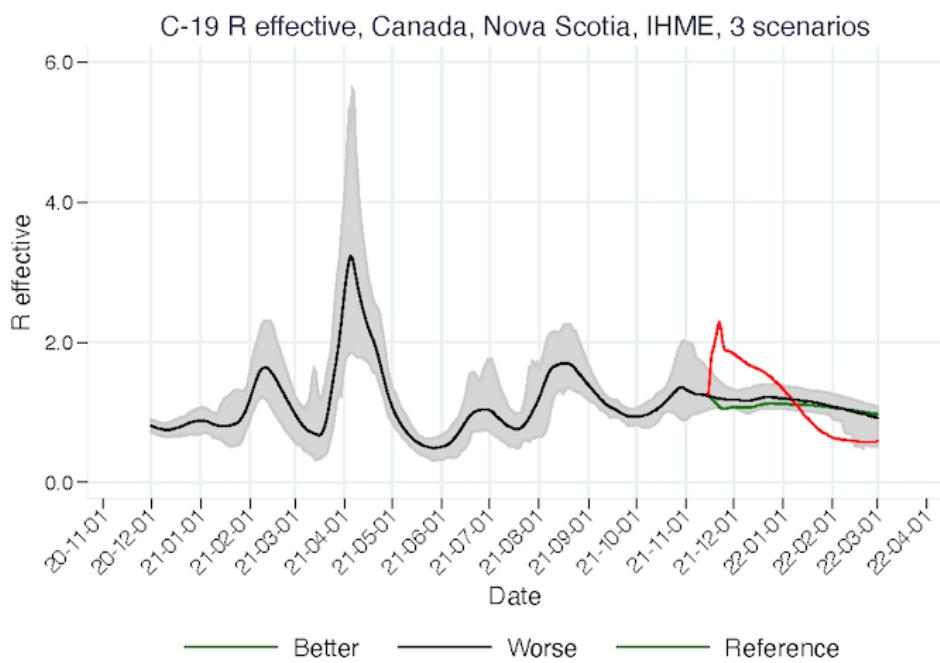

(9) Nova Scotia [Daily deaths estimated to reported, reference scenarios, 2021](#)

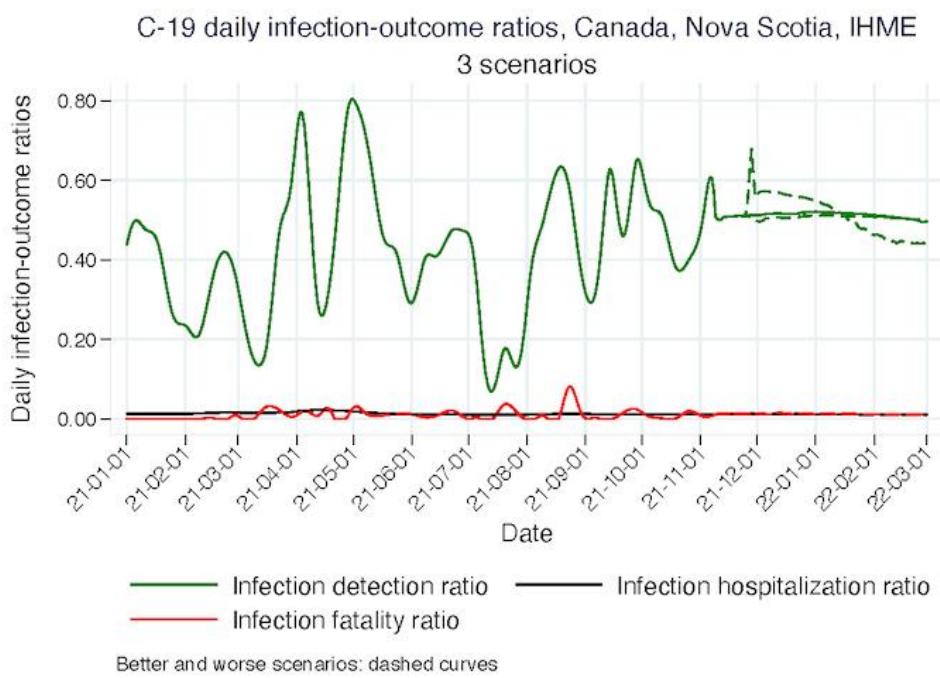

(10) Nova Scotia [Daily cases or infections estimated to reported, reference scenarios, 2021](#)

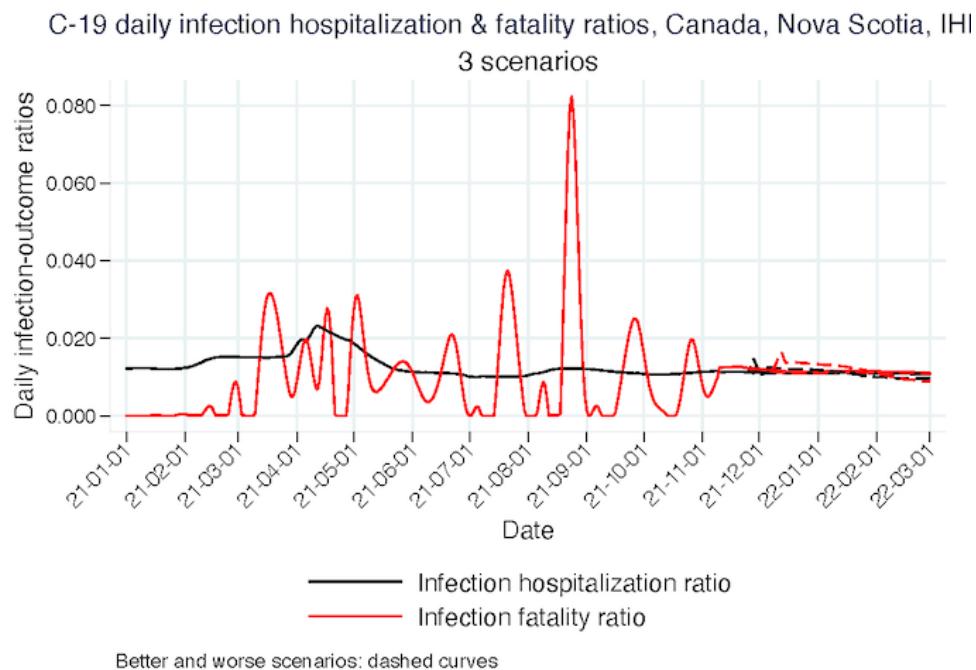

(11) Nova Scotia [R effective, 3 scenarios, IHME](#)

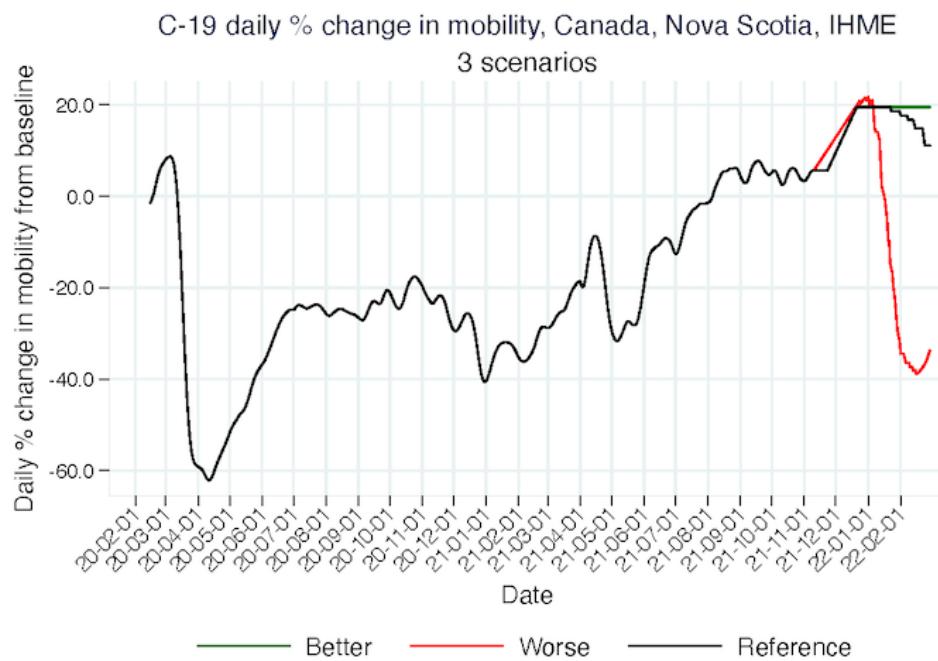

(12) Nova Scotia [Daily Infection-outcomes ratios, 3 scenarios, IHME, 2021](#)

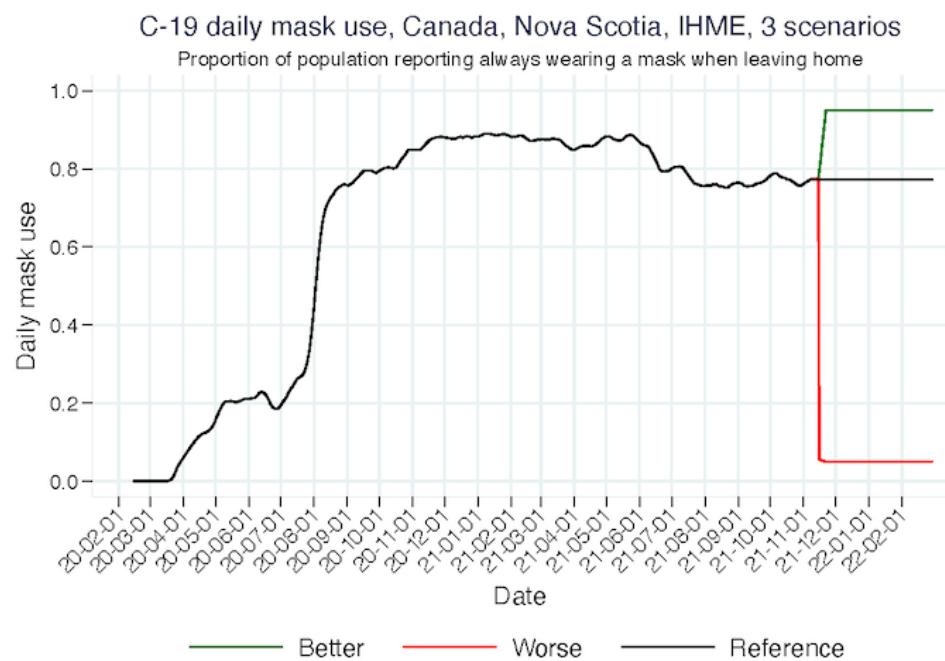

(12b) Nova Scotia [Daily infection hospitalization & fatality ratios, 3 scenarios, IHME, 2021](#)

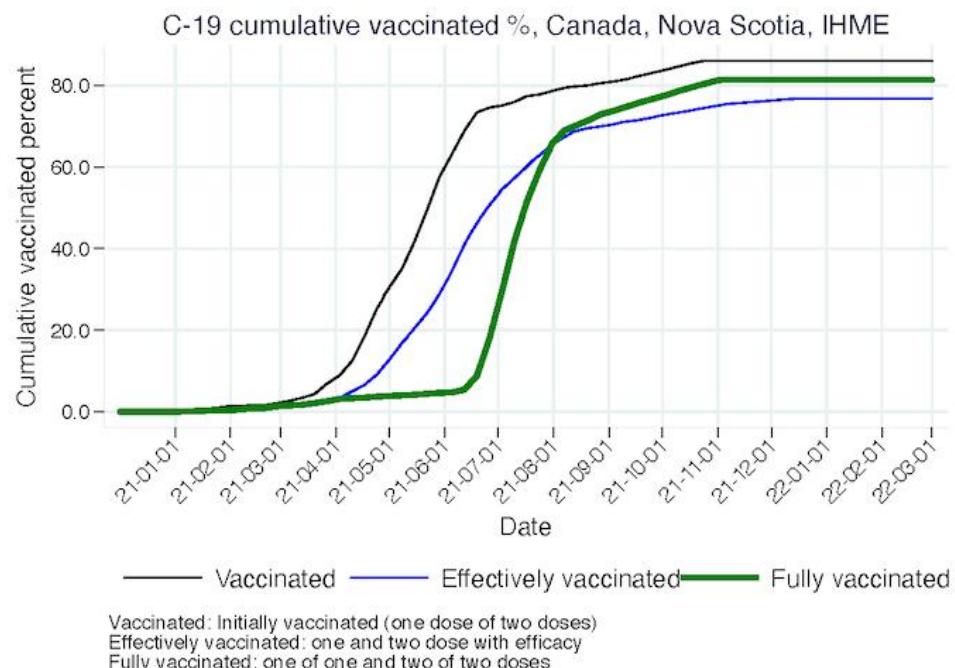

(13) Nova Scotia [Daily mobility, 3 scenarios, IHME](#)

(14) Nova Scotia [Daily mask use, 3 scenarios, IHME](#)

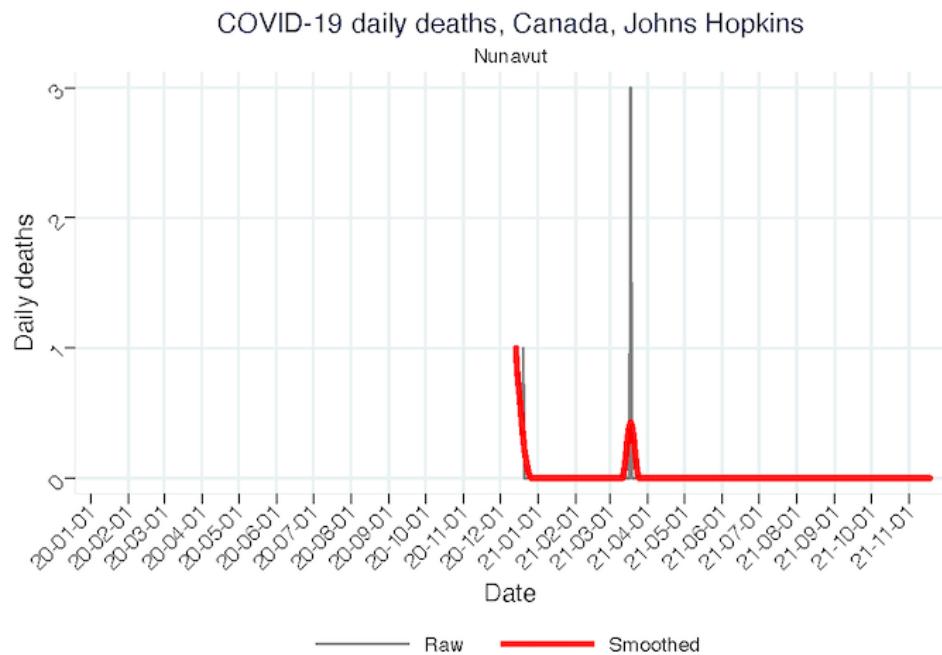

(15) Nova Scotia [Percent cumulative vaccinated, IHME](#)

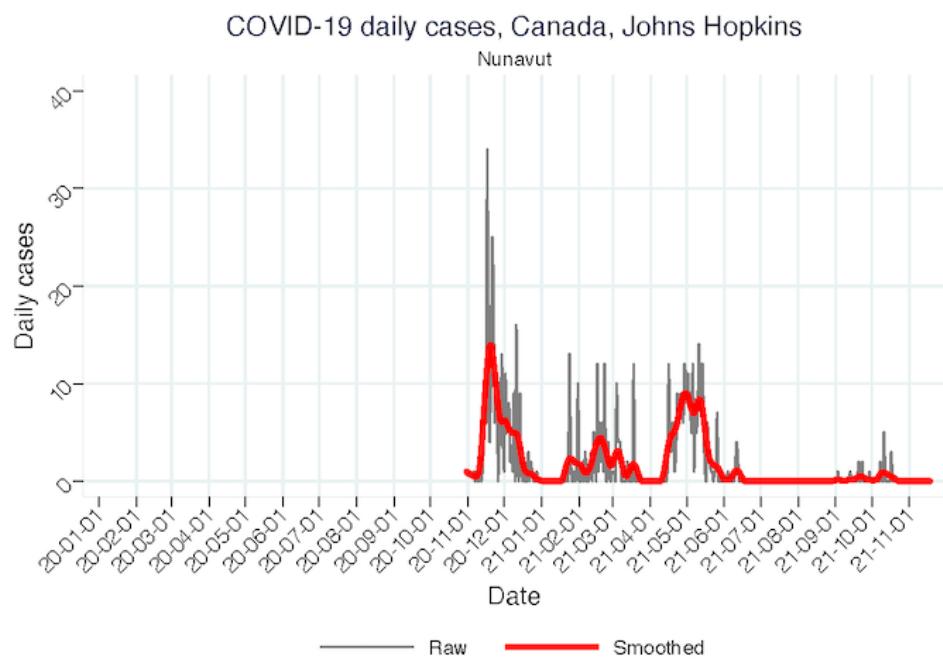

## Selected graphs - Nunavut

Nunavut predicted by none of the models. Reports to WHO available.

### (1) Nunavut [Daily deaths, reference scenarios, all time](#)

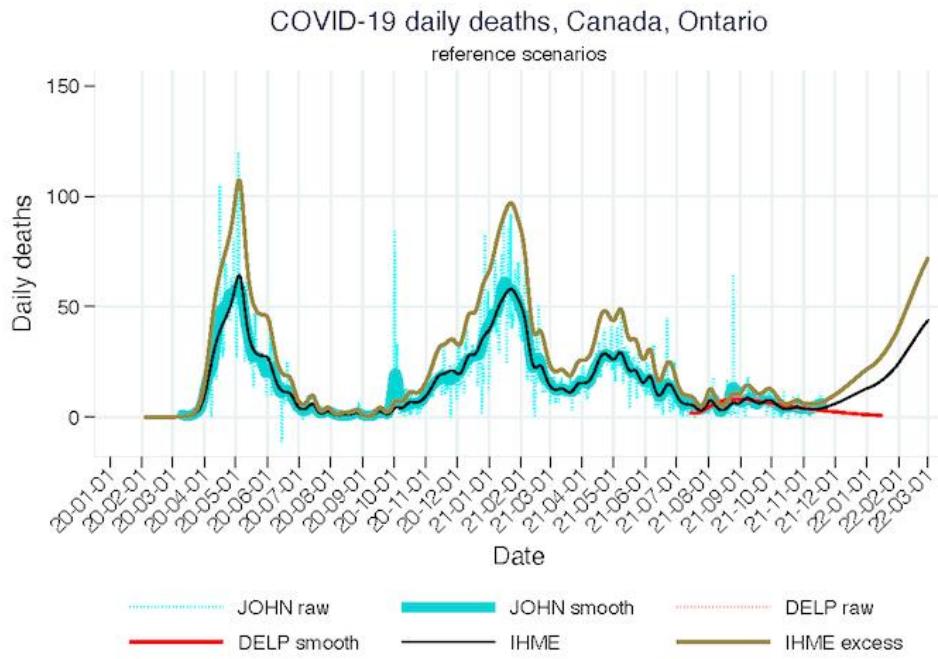

(2) Nunavut [Daily cases, reference scenarios, all time](#)

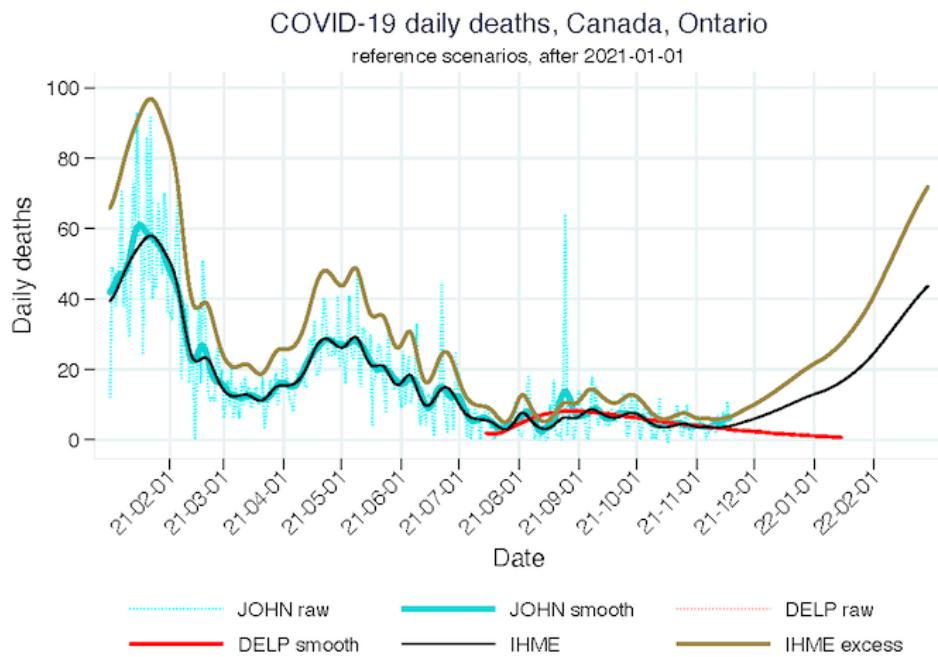

## Selected graphs - Ontario

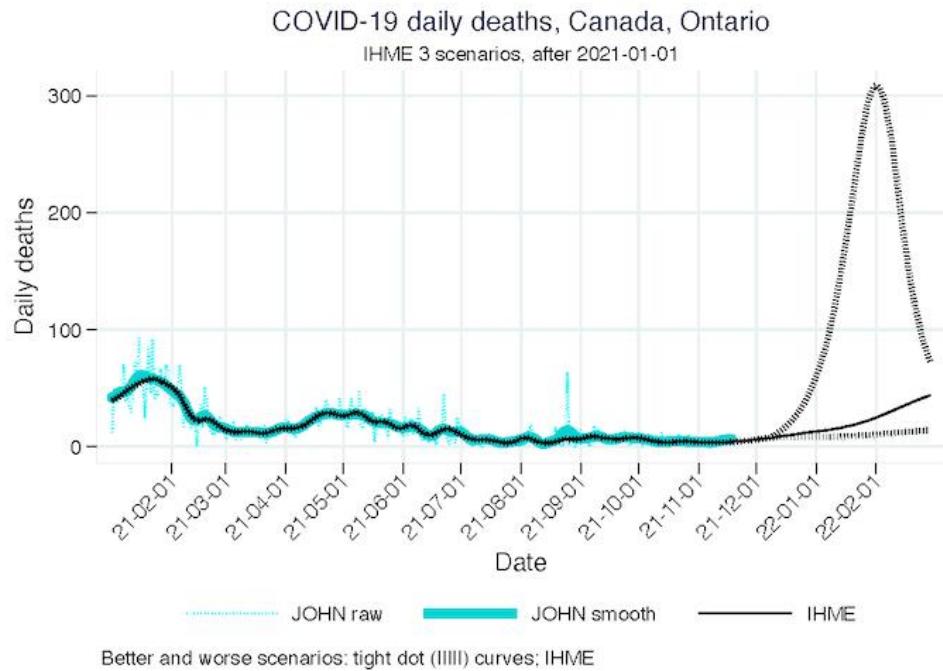

### (1) Ontario [Daily deaths, reference scenarios, all time](#)

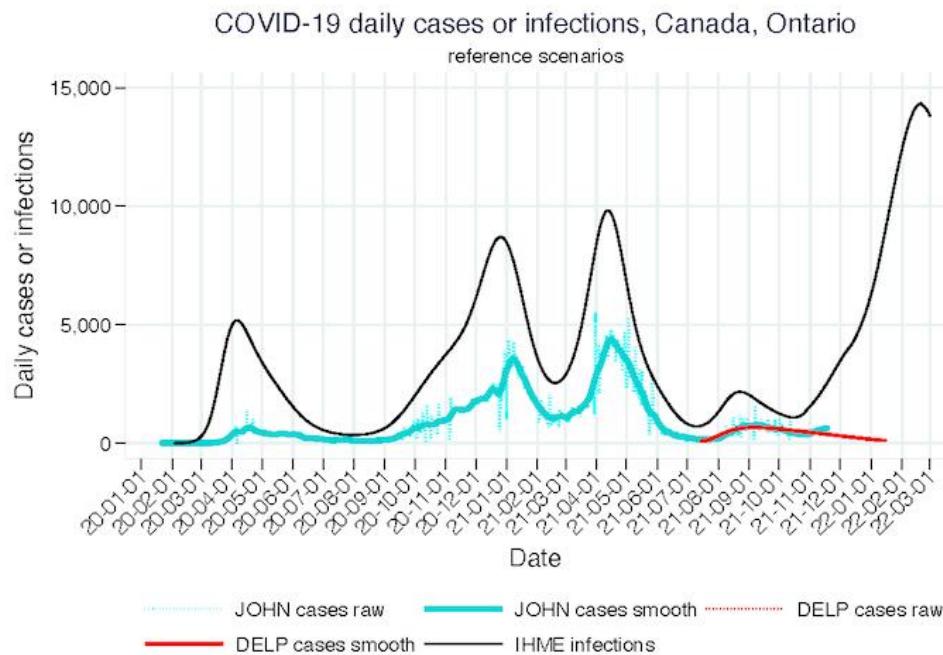

### (2) Ontario [Daily deaths, reference scenarios, 2021](#)

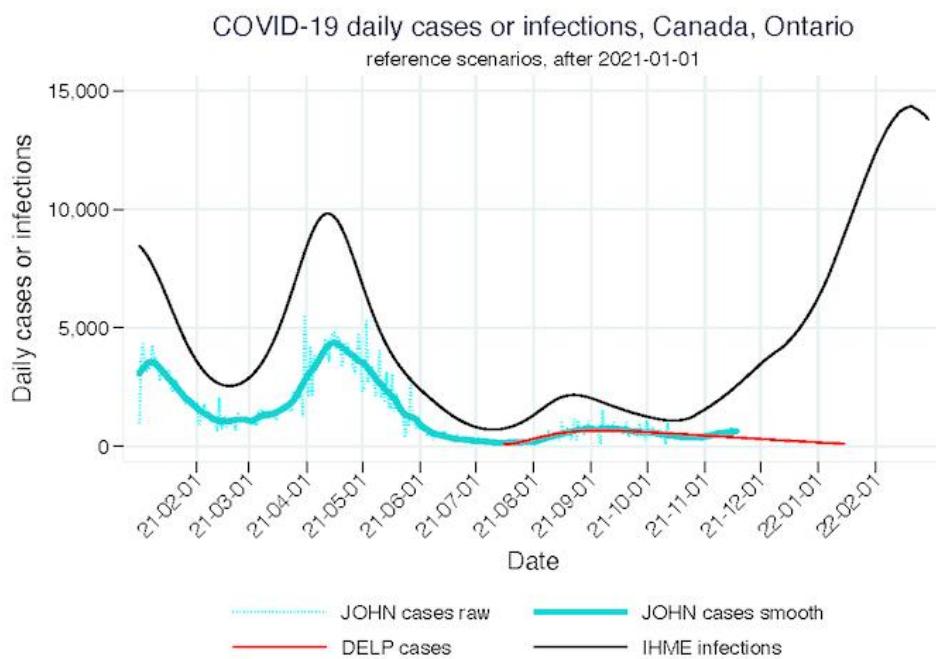

(3) Ontario [Daily deaths, 3 scenarios, 2021](#)

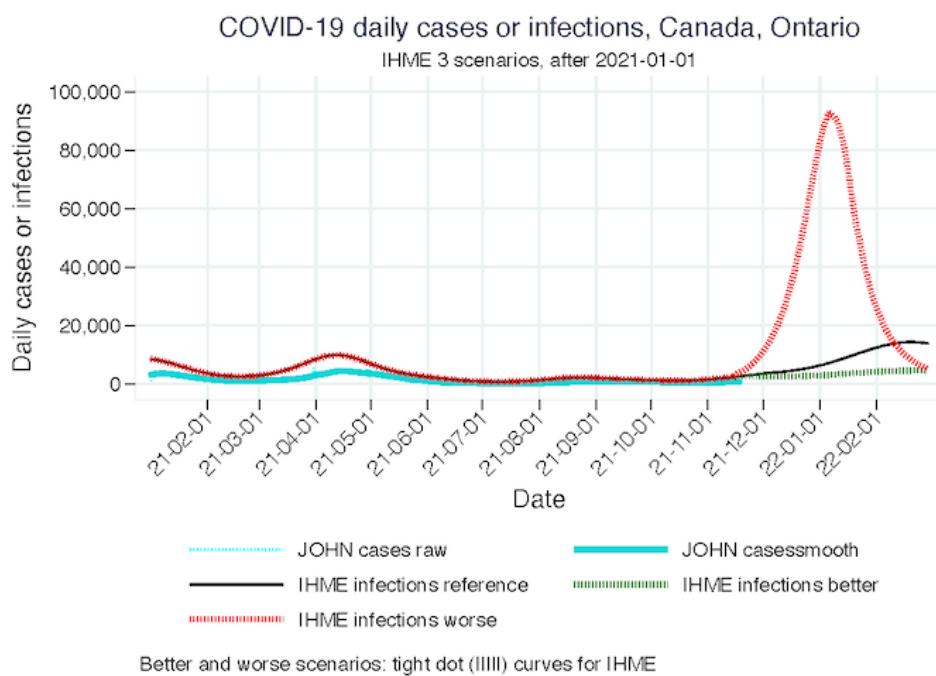

(4) Ontario [Daily cases or infections, reference scenarios, all time](#)

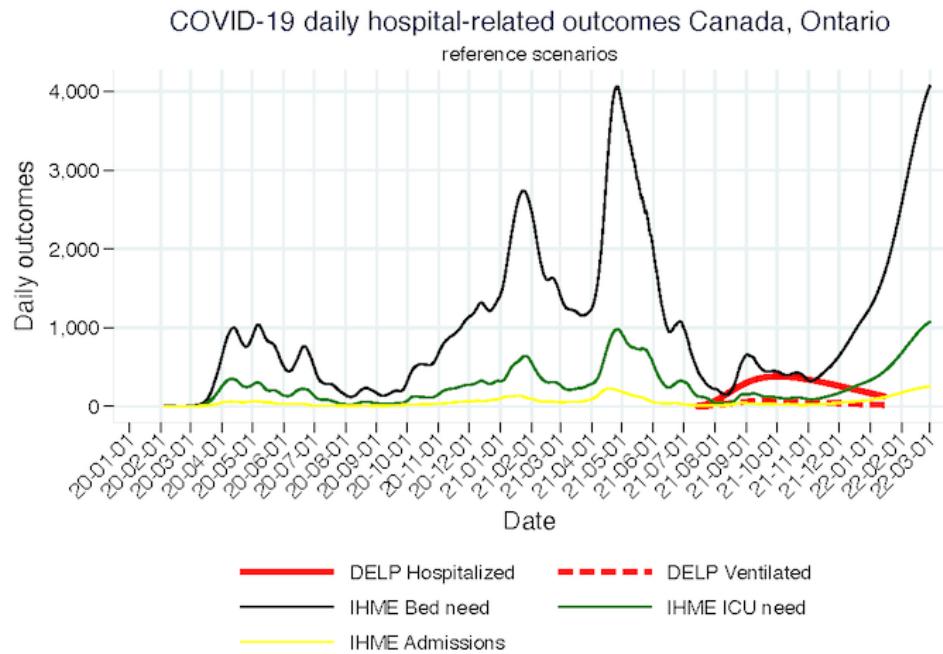

(5) Ontario [Daily cases or infections, reference scenarios, 2021](#)

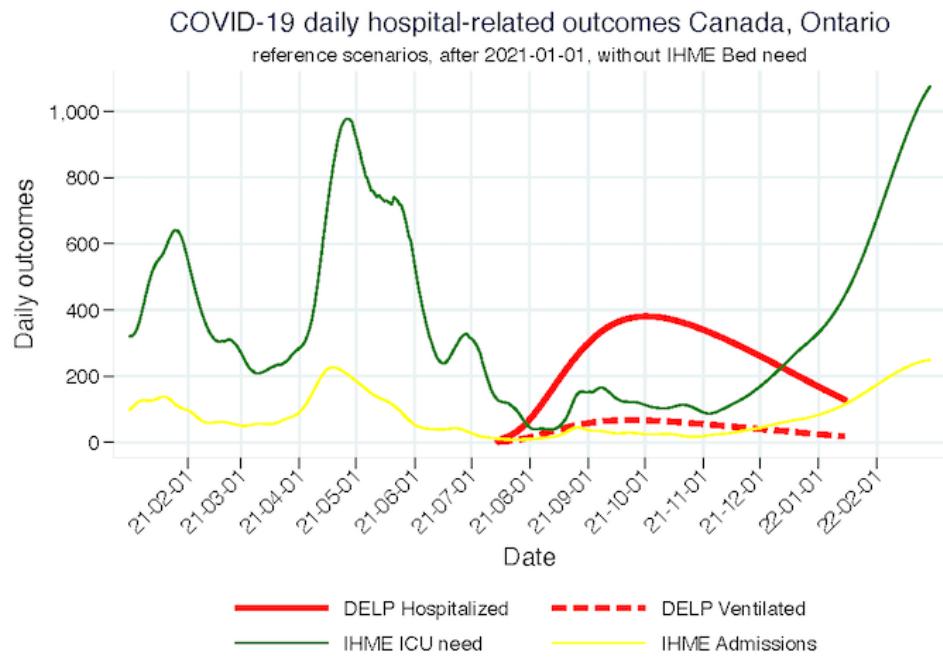

(6) Ontario [Daily cases or infections, 3 scenarios, 2021](#)

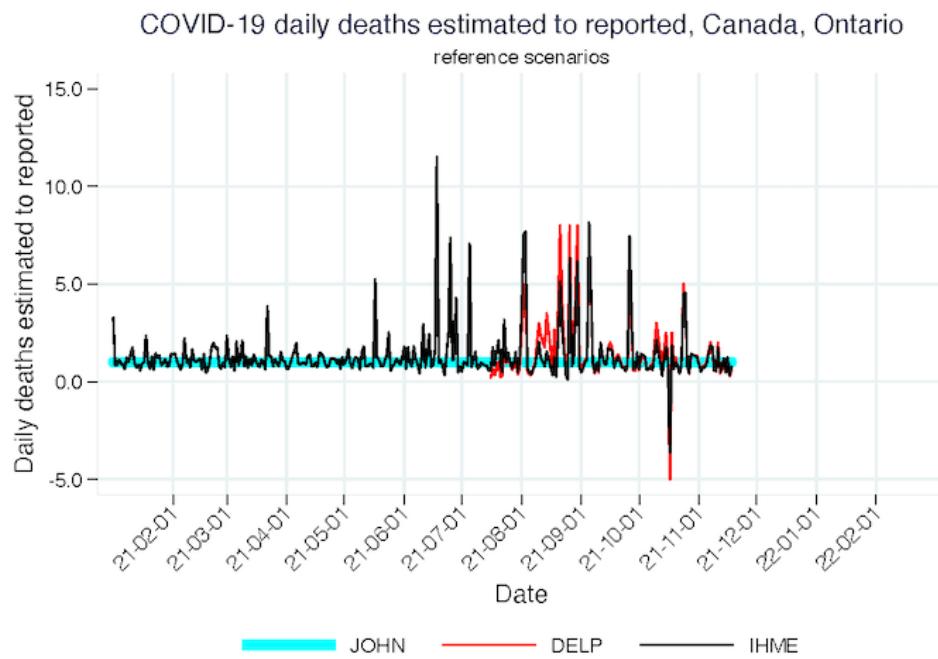

(7) Ontario [Hospital-related outcomes, all time](#)

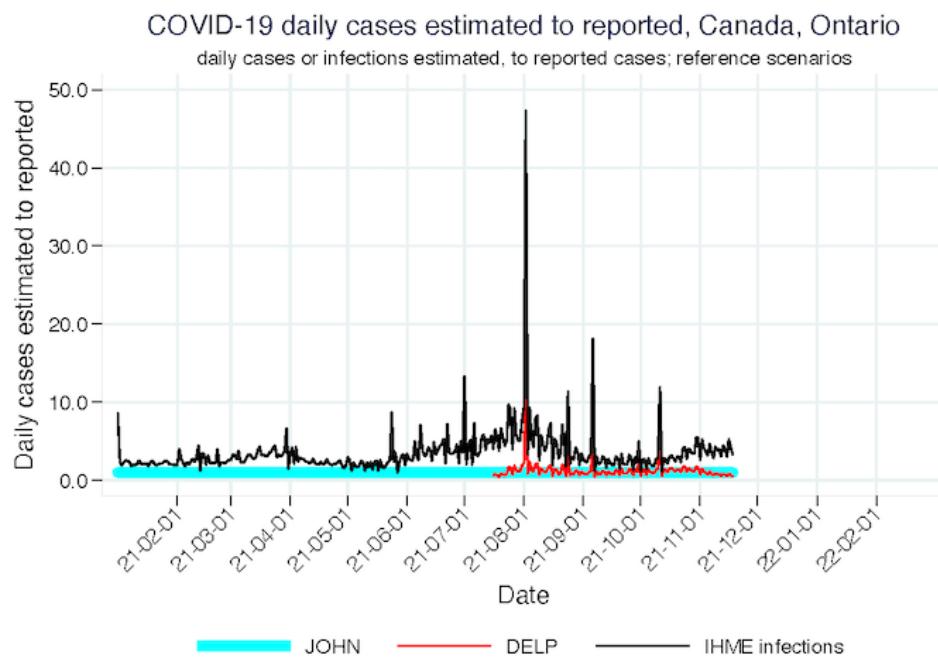

(8) Ontario [Hospital-related outcomes, 2021, without IHME Bed need and IMPE Hospital demand](#)

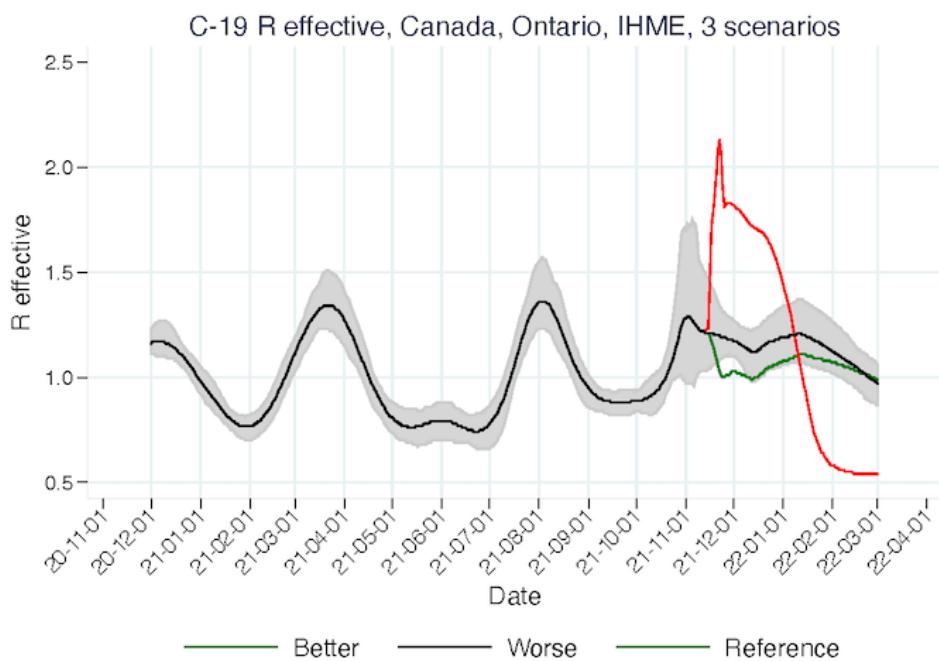

(9) Ontario [Daily deaths estimated to reported, reference scenarios, 2021](#)

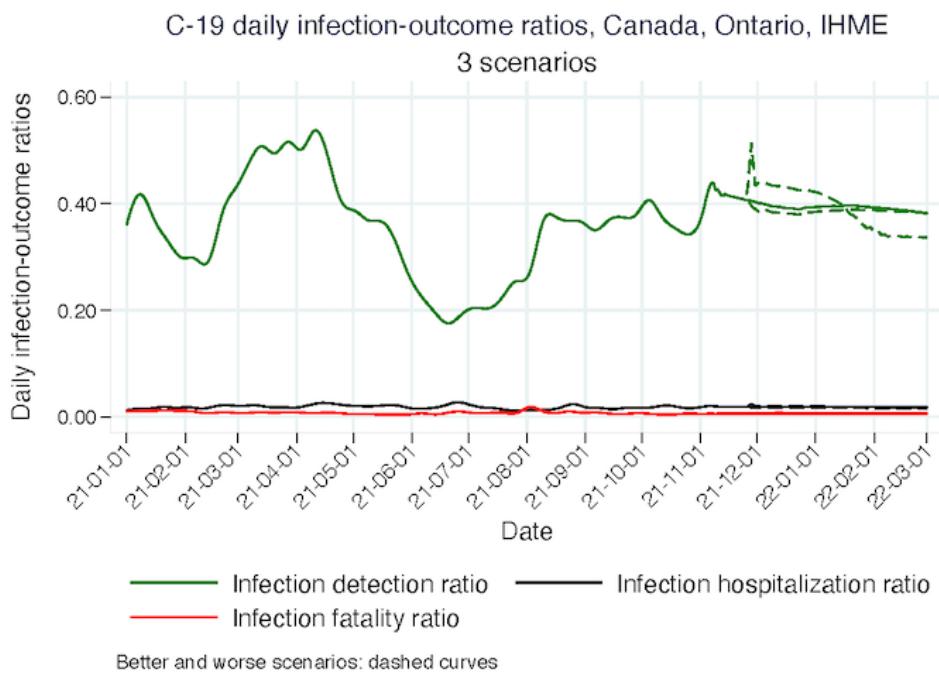

(10) Ontario [Daily cases or infections estimated to reported, reference scenarios, 2021](#)

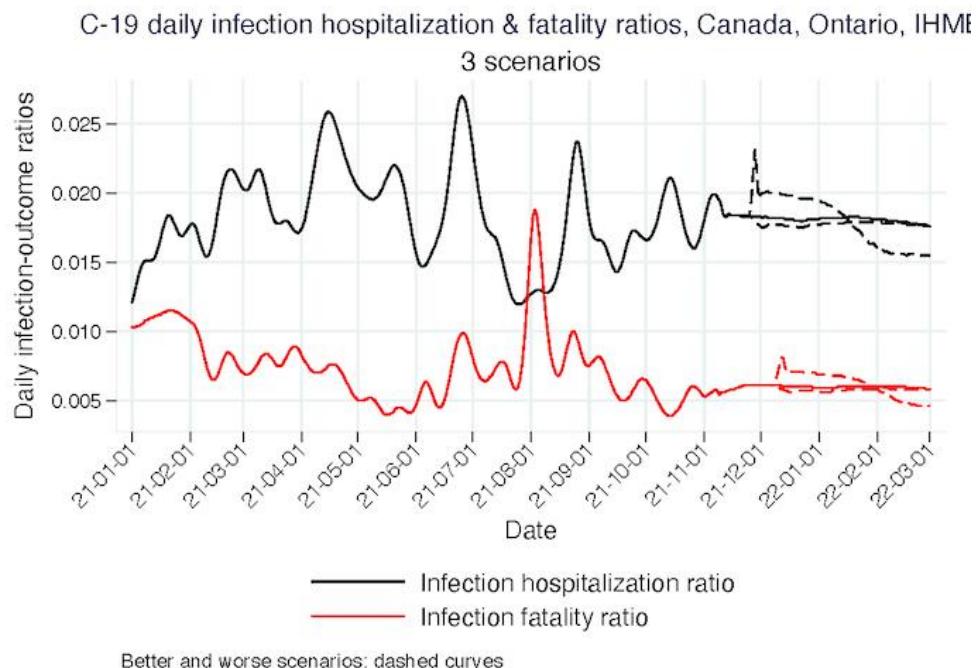

(11) Ontario [R effective, 3 scenarios](#)

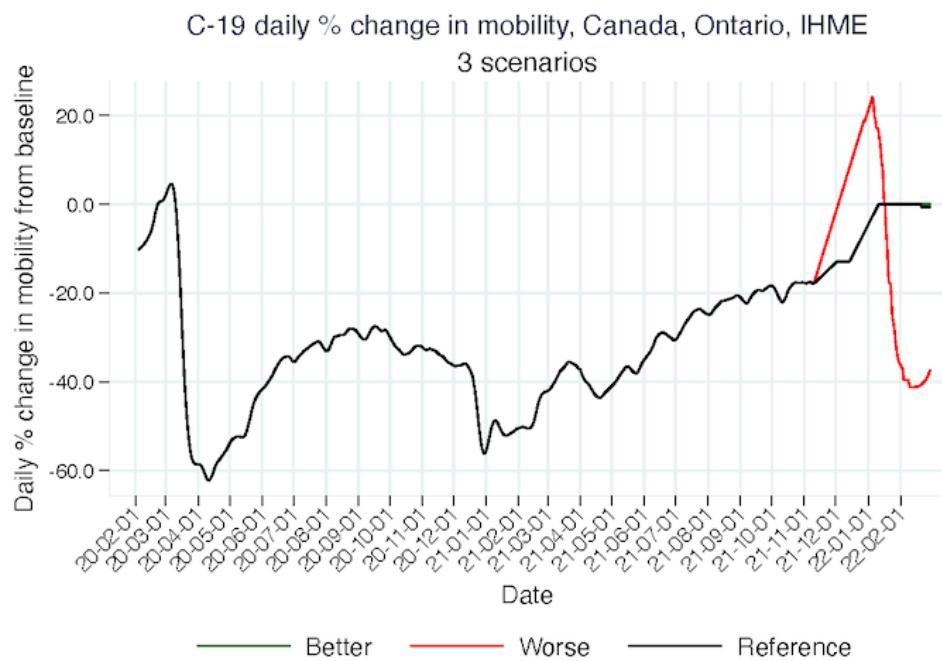

(12) Ontario [Daily Infection-outcomes ratios, 3 scenarios, IHME, 2021](#)

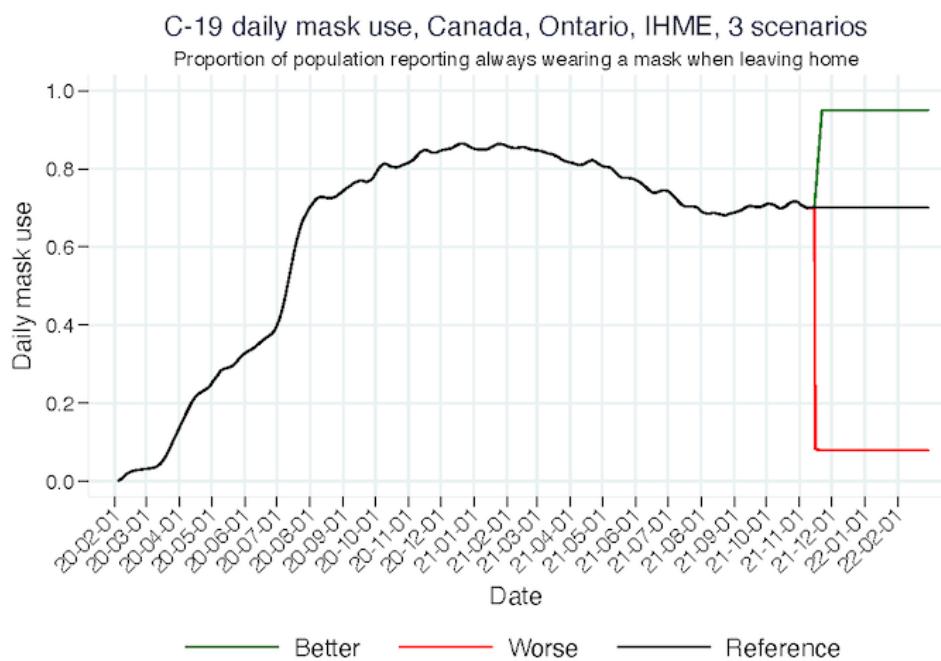

(12b) Ontario [Daily infection hospitalization & fatality ratios, 3 scenarios, IHME](#)

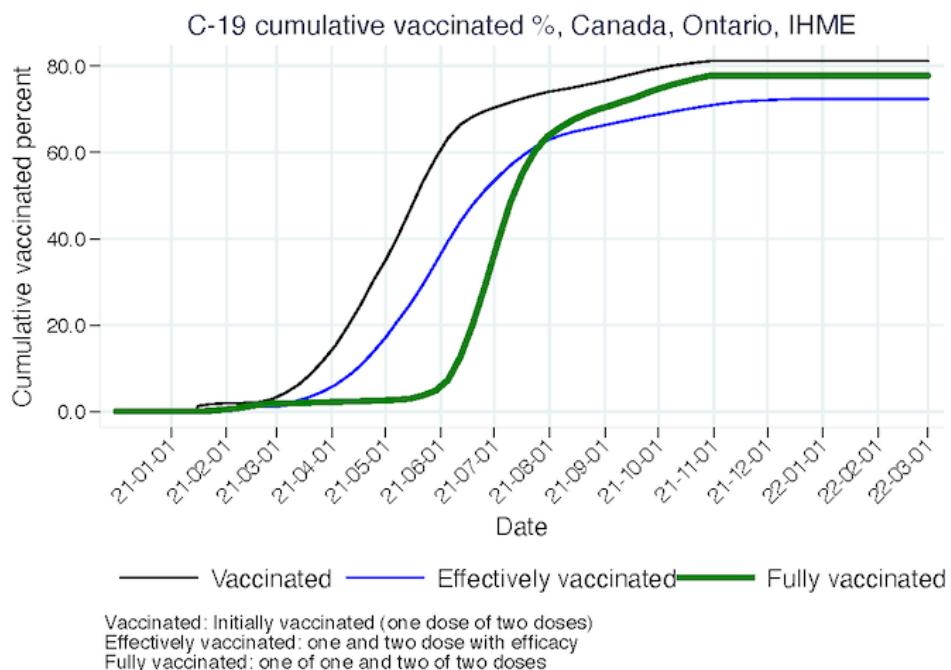

(13) Ontario [Daily mobility, 3 scenarios, IHME](#)

(14) Ontario [Daily mask use, 3 scenarios, IHME](#)

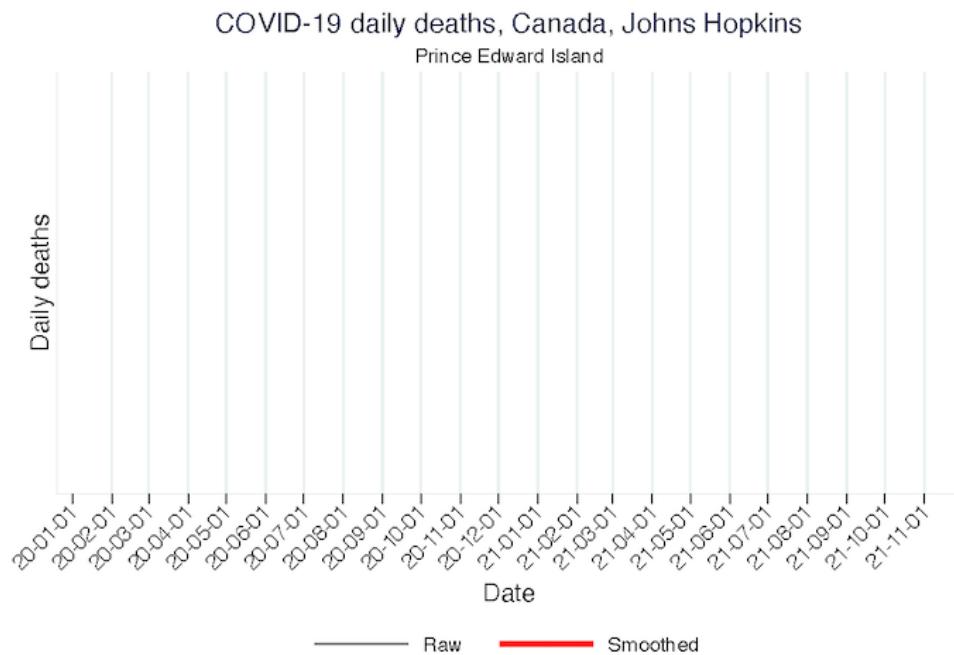

(15) Ontario [Percent cumulative vaccinated, IHME](#)

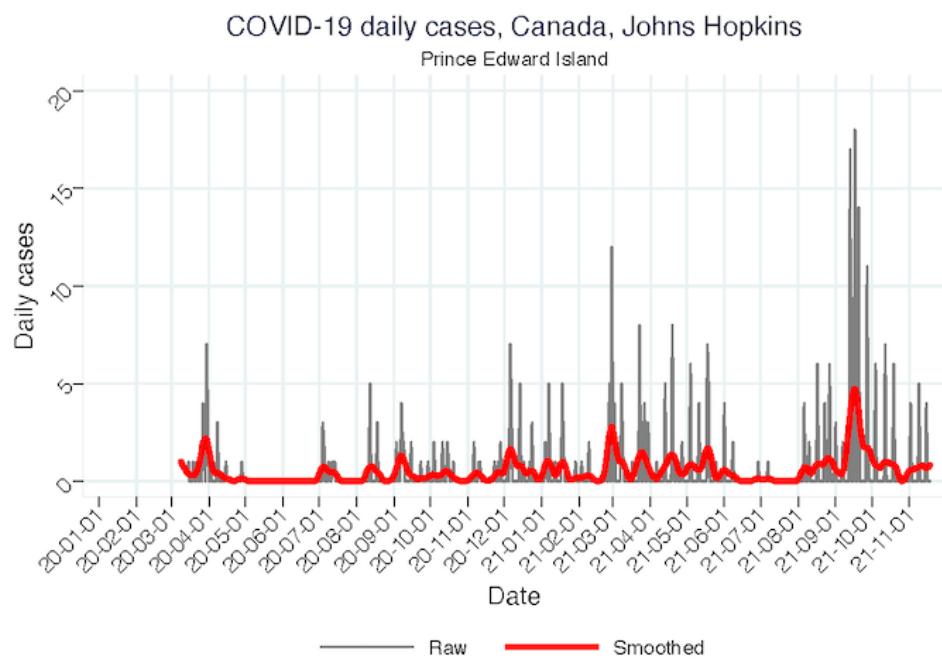

## Selected graphs - Prince Edward Island

Prince Edward Island predicted by none of the models. Reports to WHO available.

### (1) Prince Edward Island [Daily deaths, reference scenarios, all time](#)

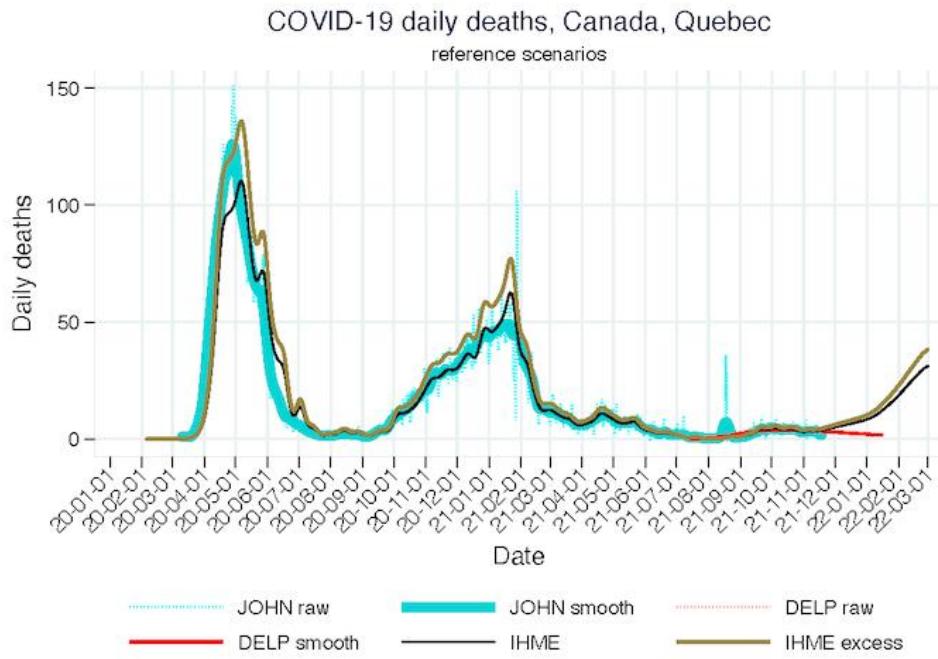

(2) Prince Edward Island [Daily cases, reference scenarios, all time](#)

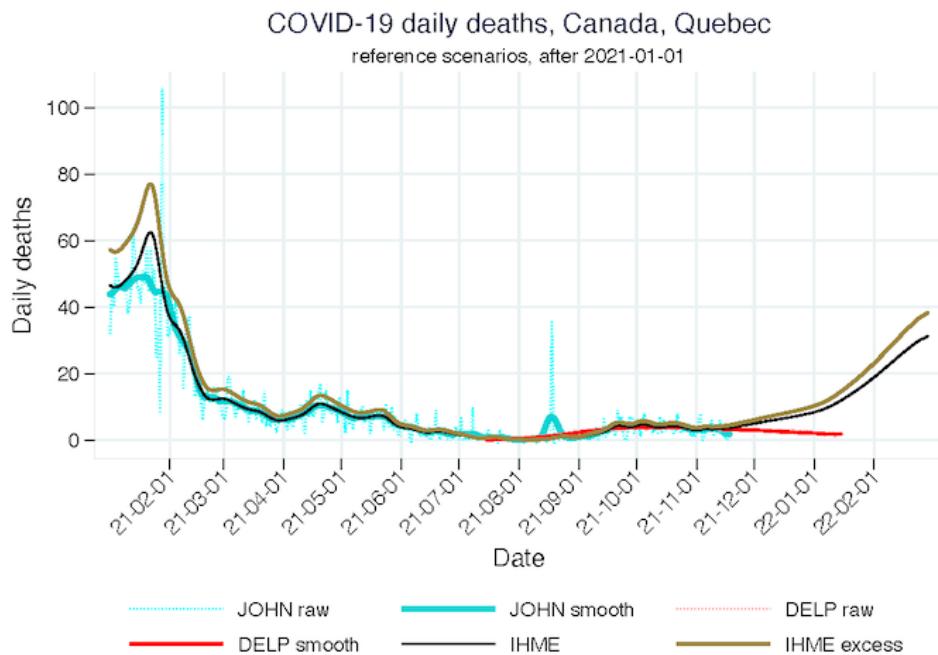

## Selected graphs - Quebec

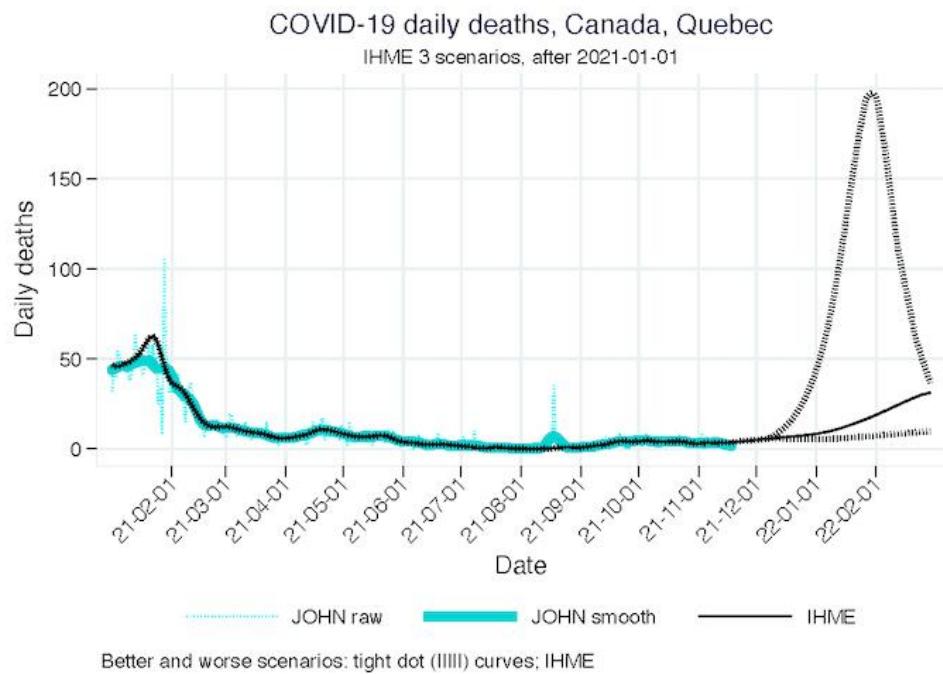

### (1) Quebec [Daily deaths, reference scenarios, all time](#)

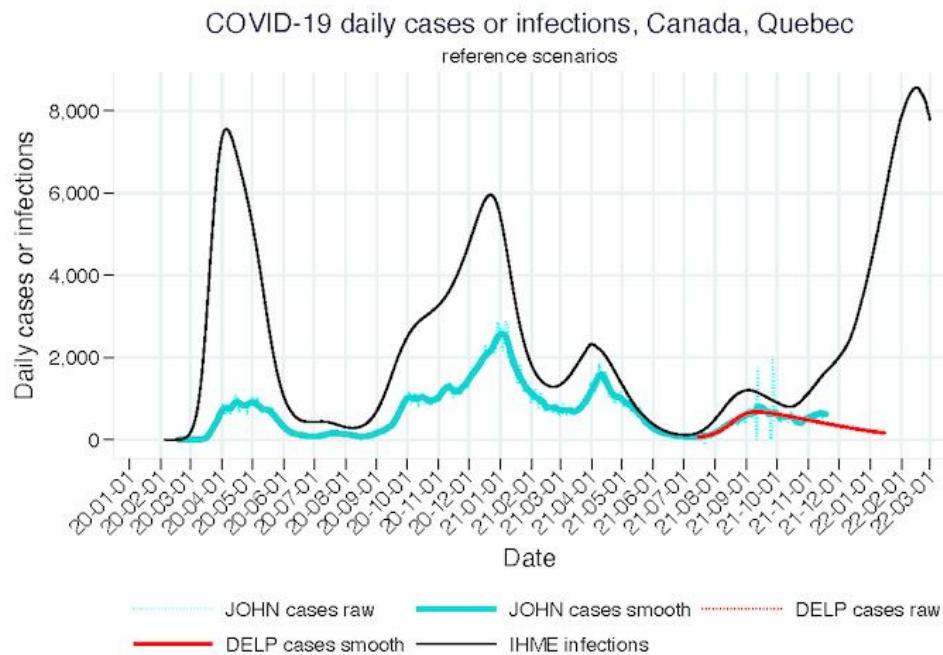

### (2) Quebec [Daily deaths, reference scenarios, 2021](#)

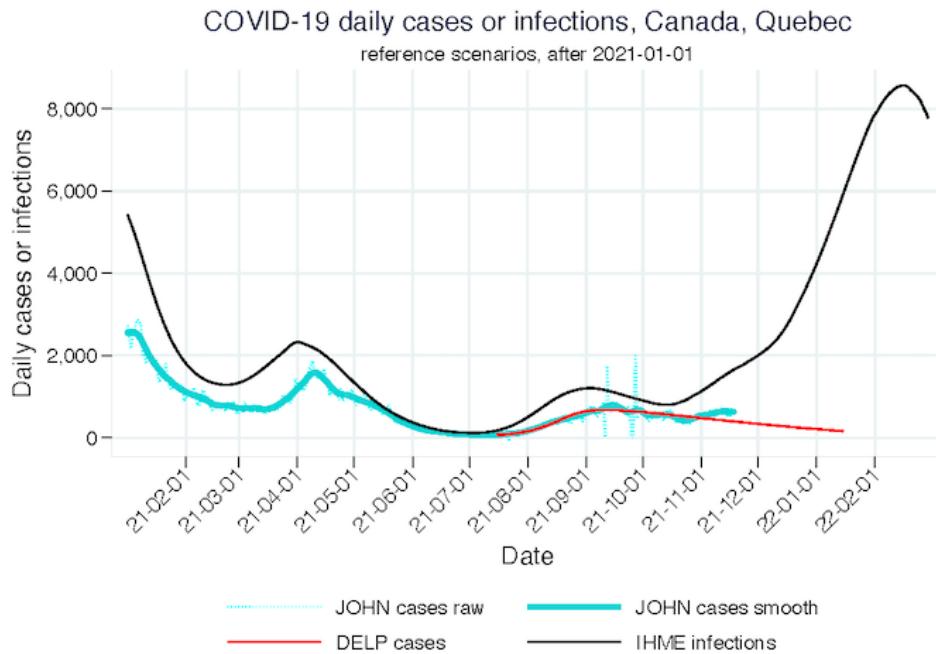

(3) Quebec [Daily deaths, 3 scenarios, 2021](#)

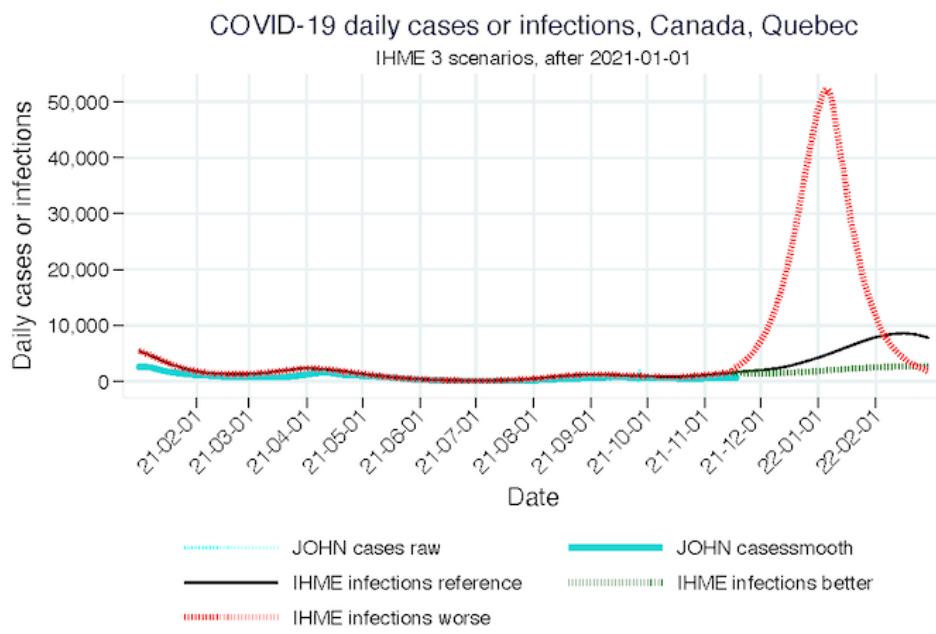

(4) Quebec [Daily cases or infections, reference scenarios, all time](#)

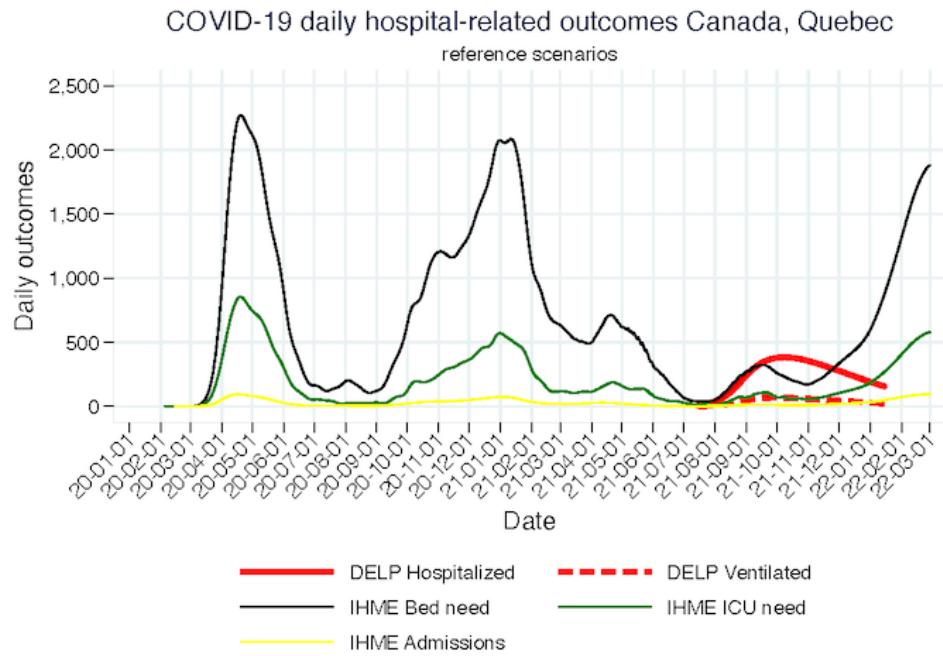

(5) Quebec [Daily cases or infections, reference scenarios, 2021](#)

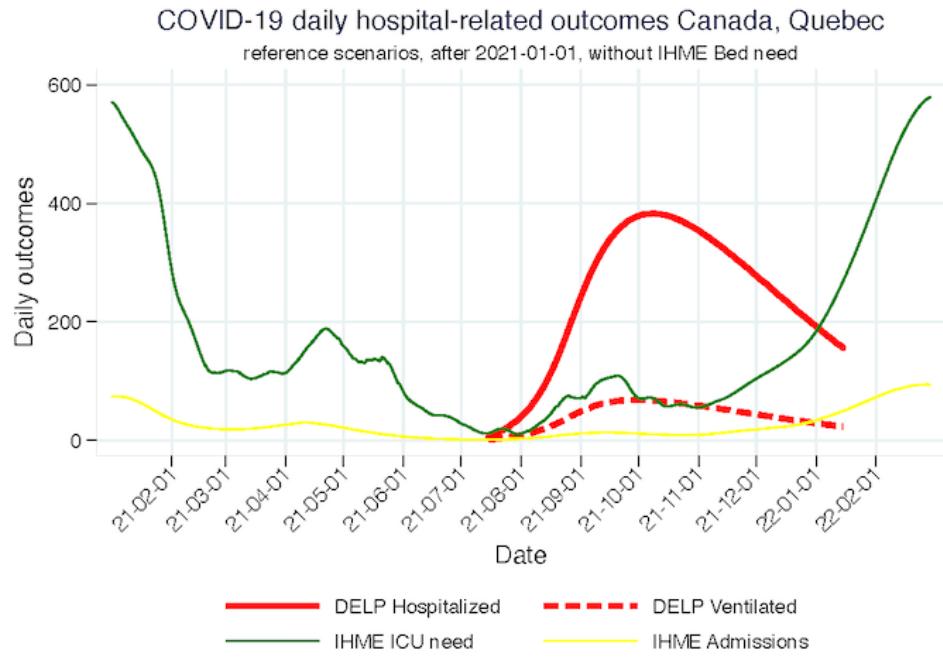

(6) Quebec [Daily cases or infections, 3 scenarios, 2021](#)

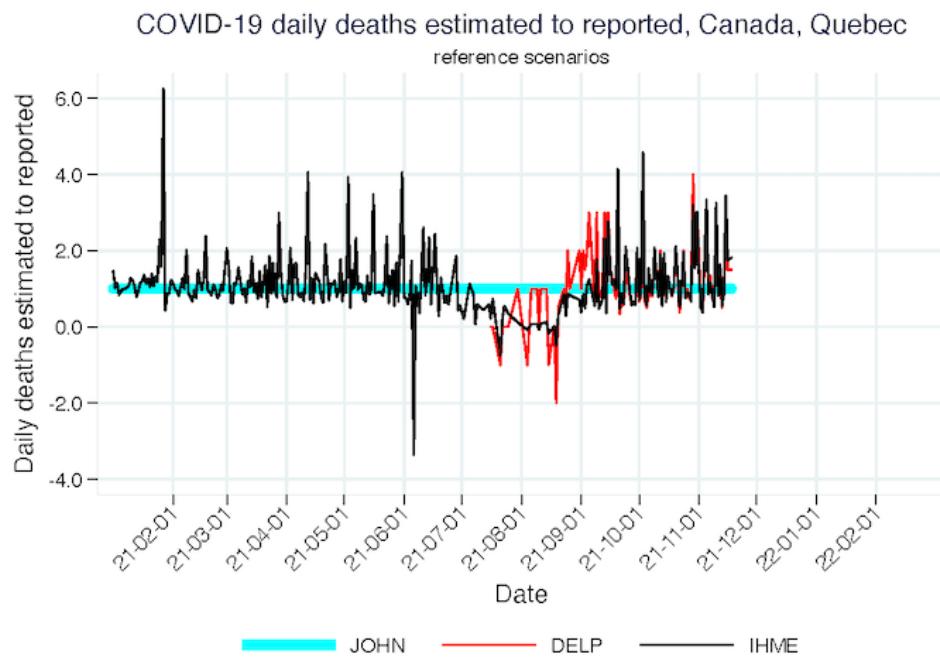

(7) Quebec [Hospital-related outcomes, all time](#)

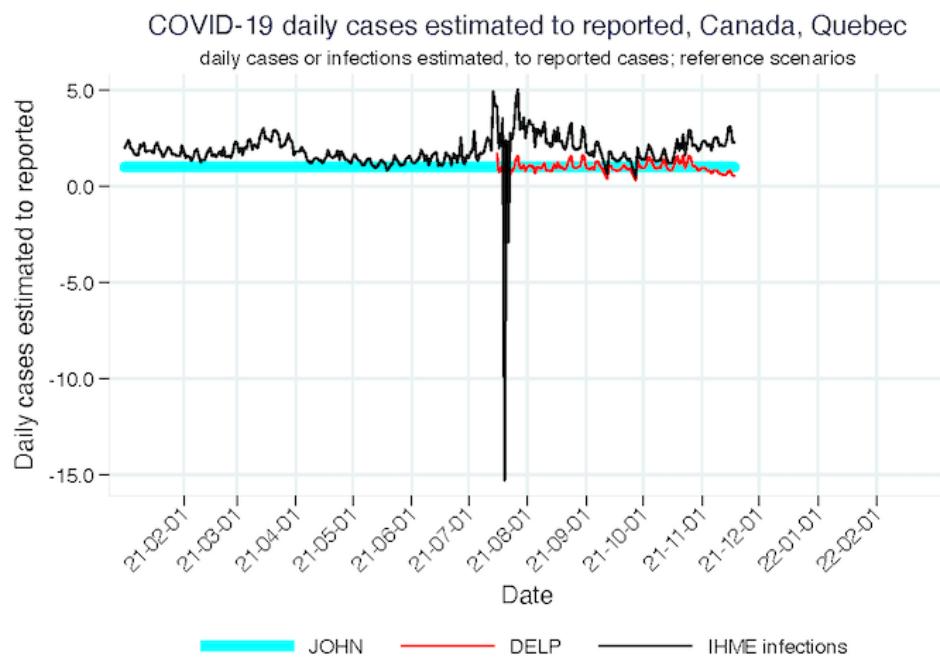

(8) Quebec [Hospital-related outcomes, 2021, without IHME Bed need and IMPE Hospital demand](#)

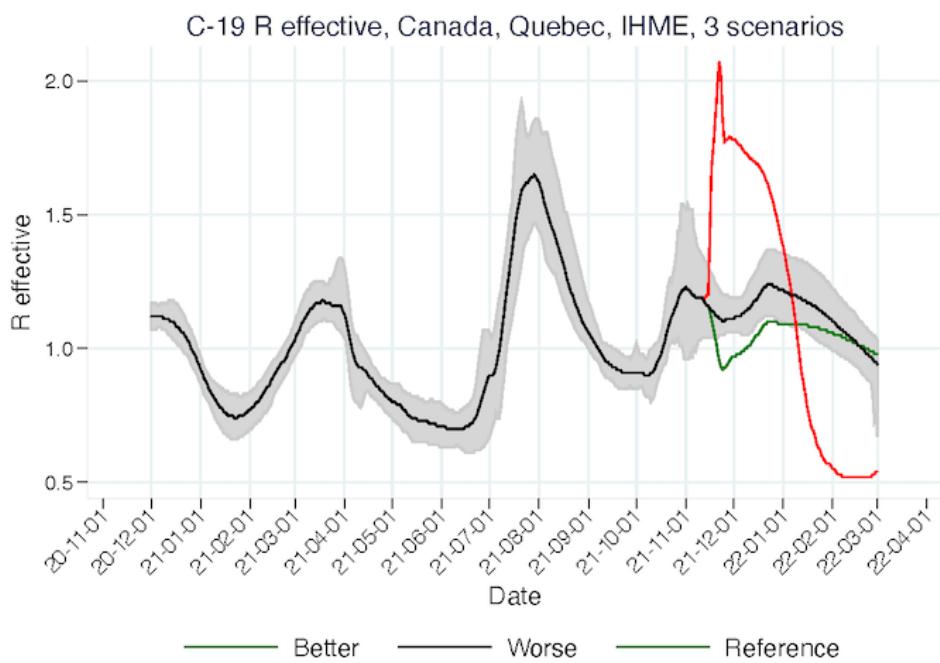

(9) Quebec [Daily deaths estimated to reported, reference scenarios, 2021](#)

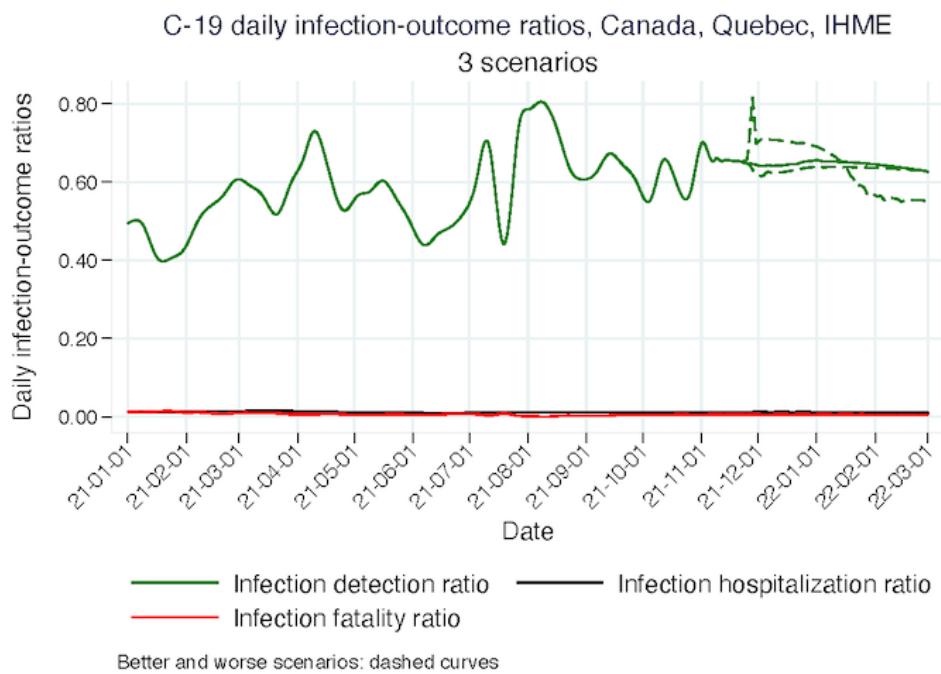

(10) Quebec [Daily cases or infections estimated to reported, reference scenarios, 2021](#)

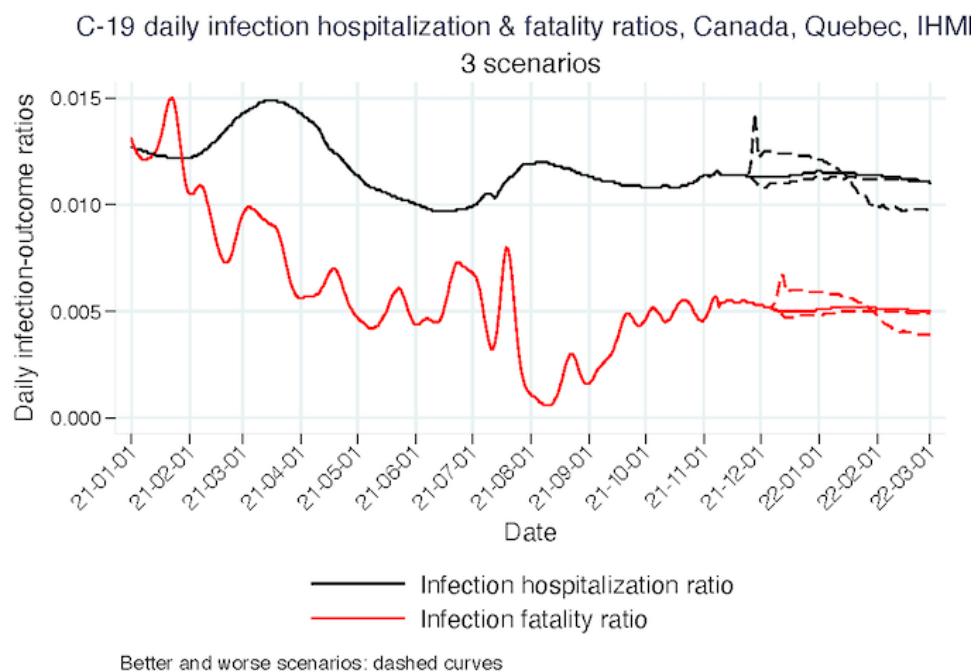

(11) Quebec [R effective, 3 scenarios, IHME](#)

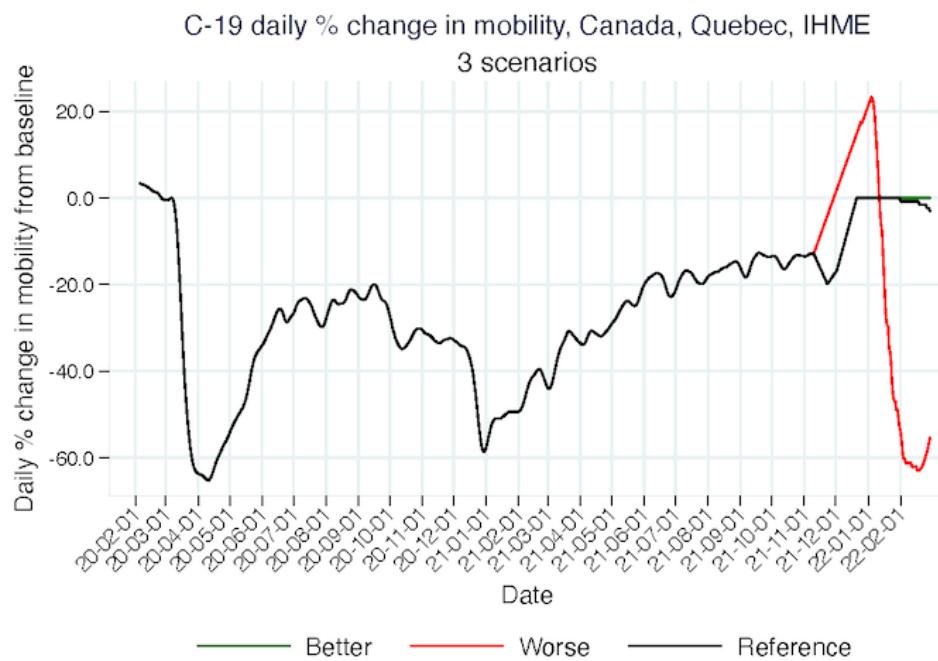

(12) Quebec [Daily Infection-outcomes ratios, 3 scenarios, IHME, 2021](#)

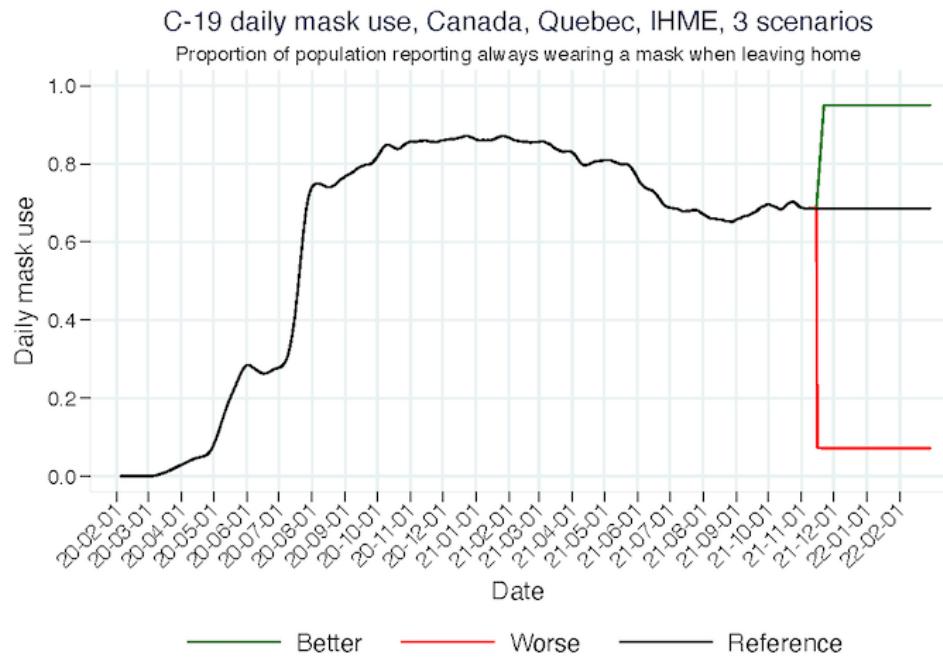

(12b) Quebec [Daily infection hospitalization & fatality ratios, 3 scenarios, IHME, 2021](#)

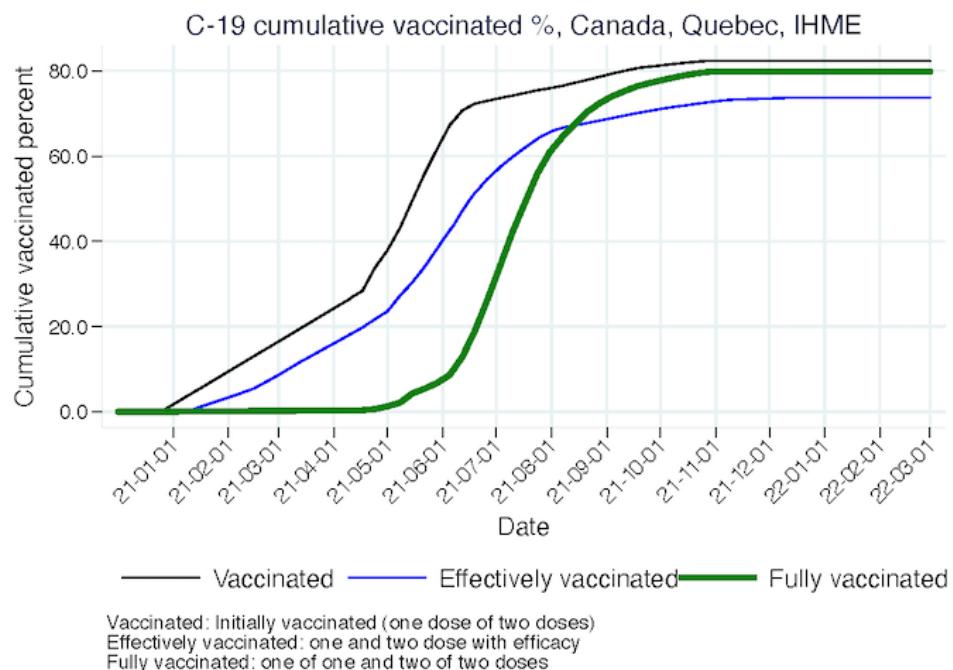

(13) Quebec [Daily mobility, 3 scenarios, IHME](#)

(14) Quebec [Daily mask use, 3 scenarios, IHME](#)

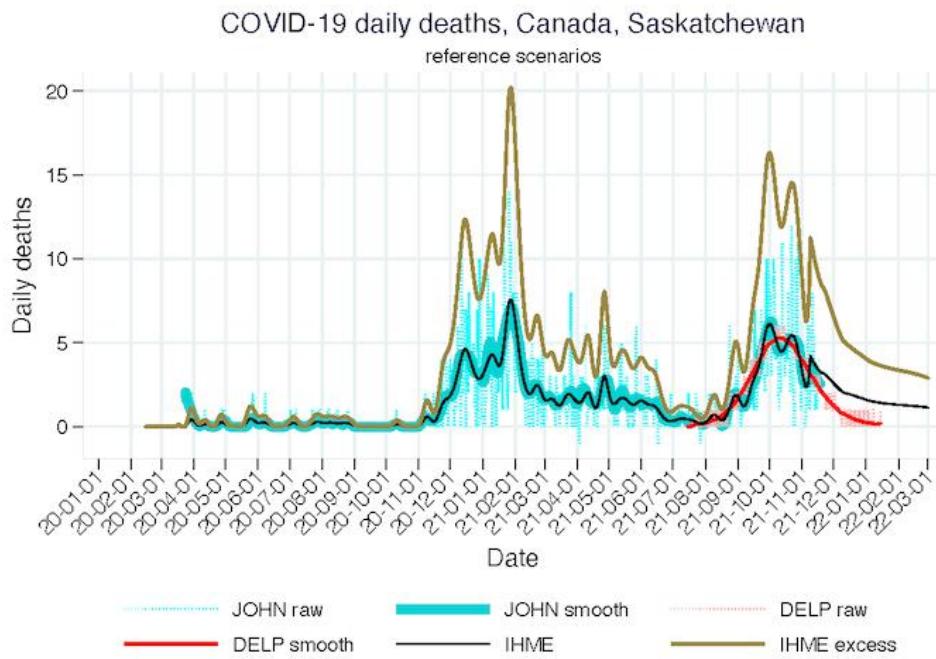

(15) Quebec [Percent cumulative vaccinated, IHME](#)

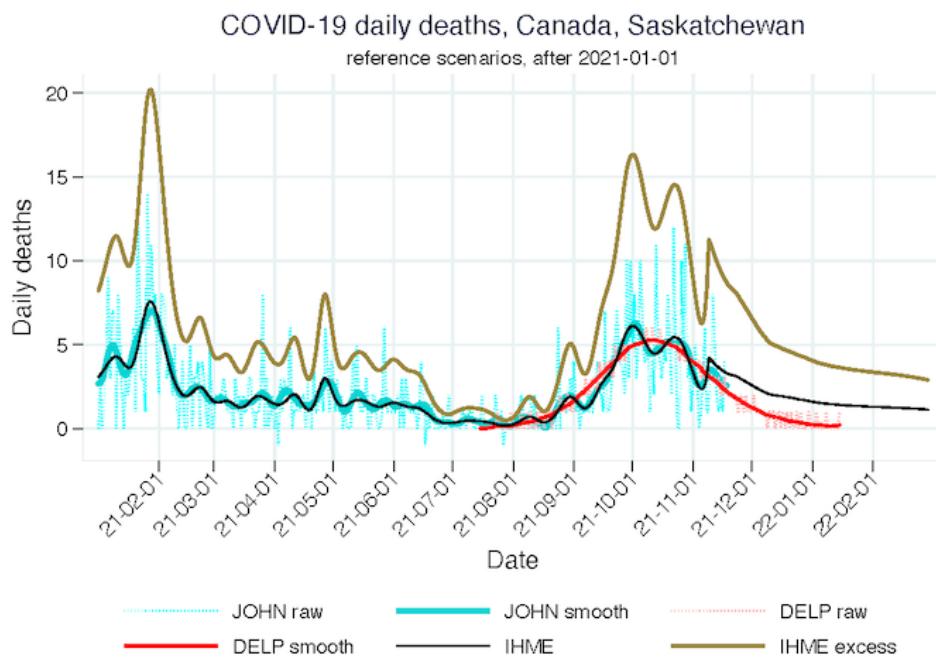

## Selected graphs - Saskatchewan

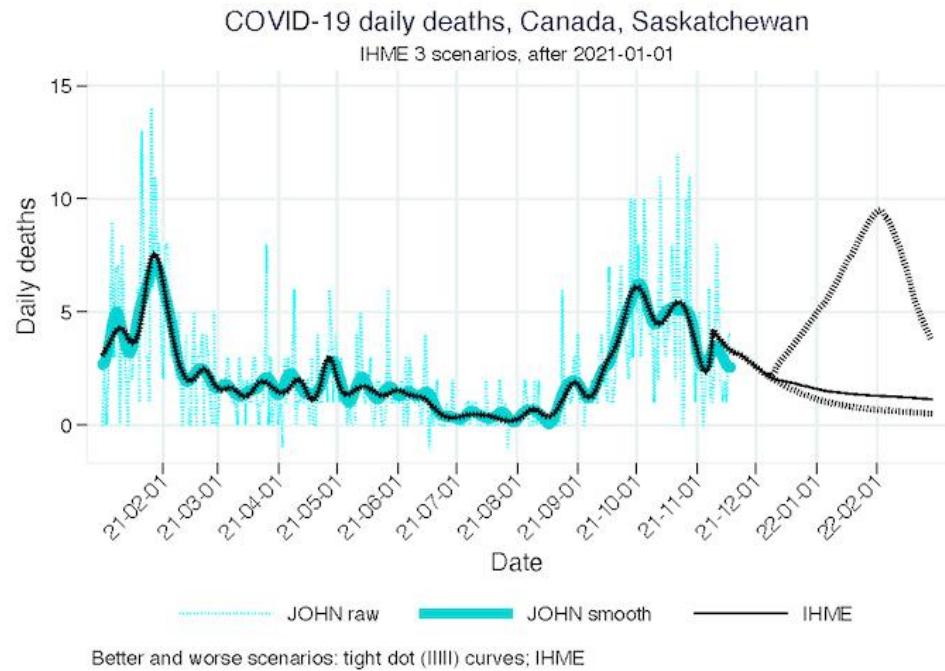

### (1) Saskatchewan [Daily deaths, reference scenarios, all time](#)

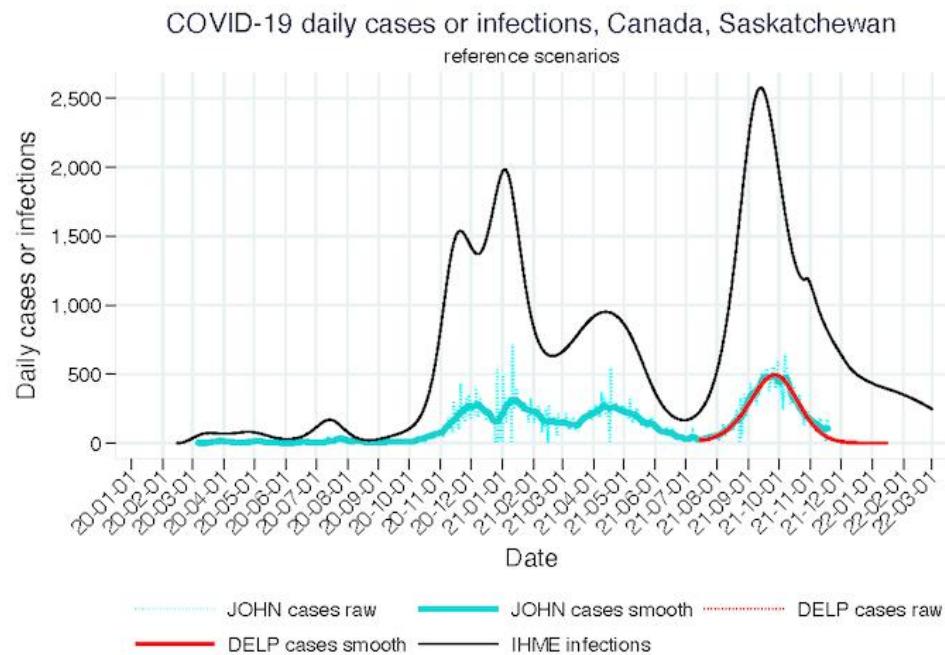

### (2) Saskatchewan [Daily deaths, reference scenarios, 2021](#)

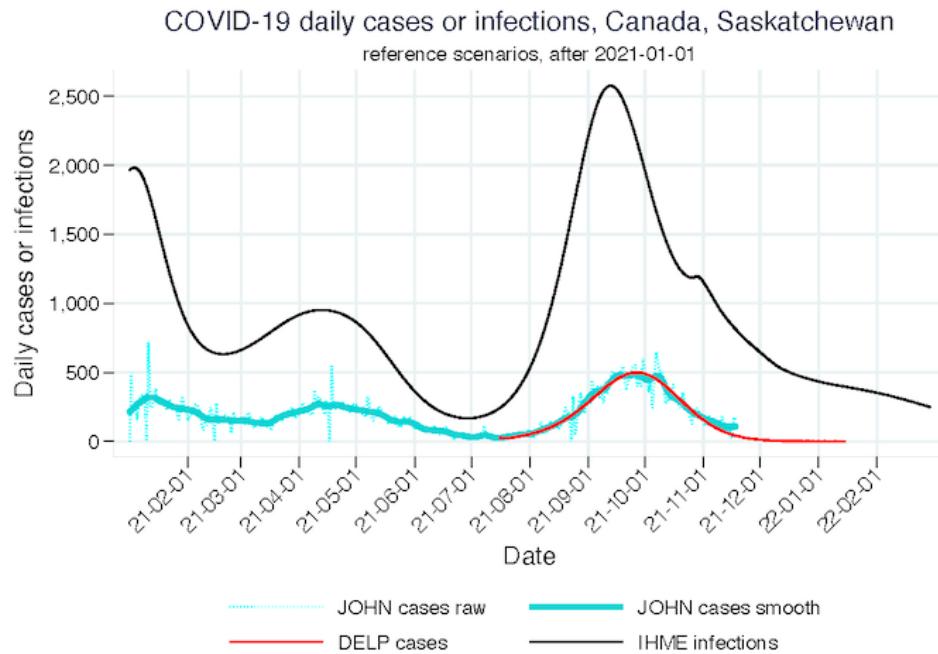

(3) Saskatchewan [Daily deaths, 3 scenarios, 2021](#)

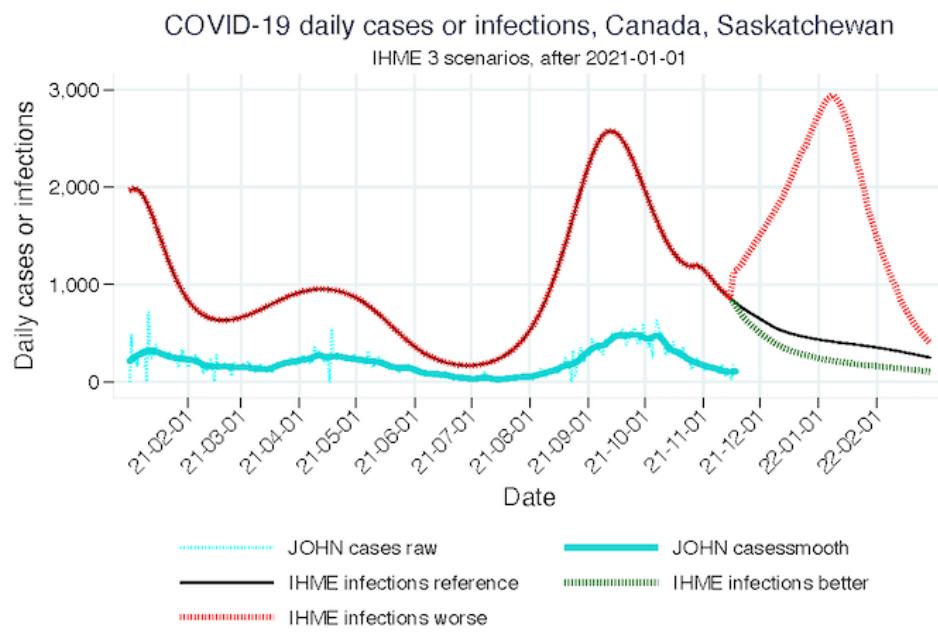

(4) Saskatchewan [Daily cases or infections, reference scenarios, all time](#)

(5) Saskatchewan [Daily cases or infections, reference scenarios, 2021](#)

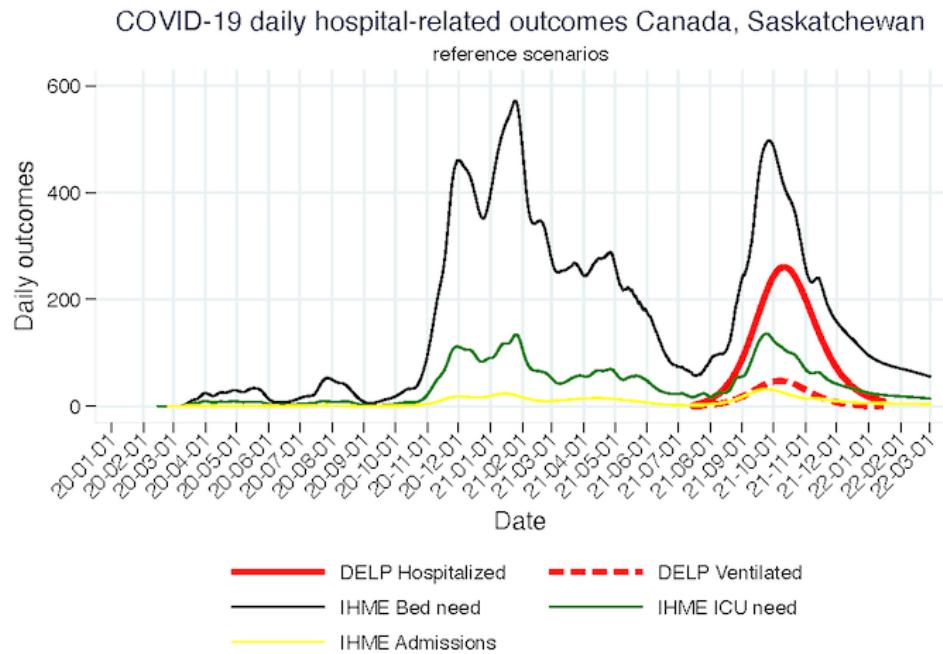

(6) Saskatchewan [Daily cases or infections, 3 scenarios, 2021](#)

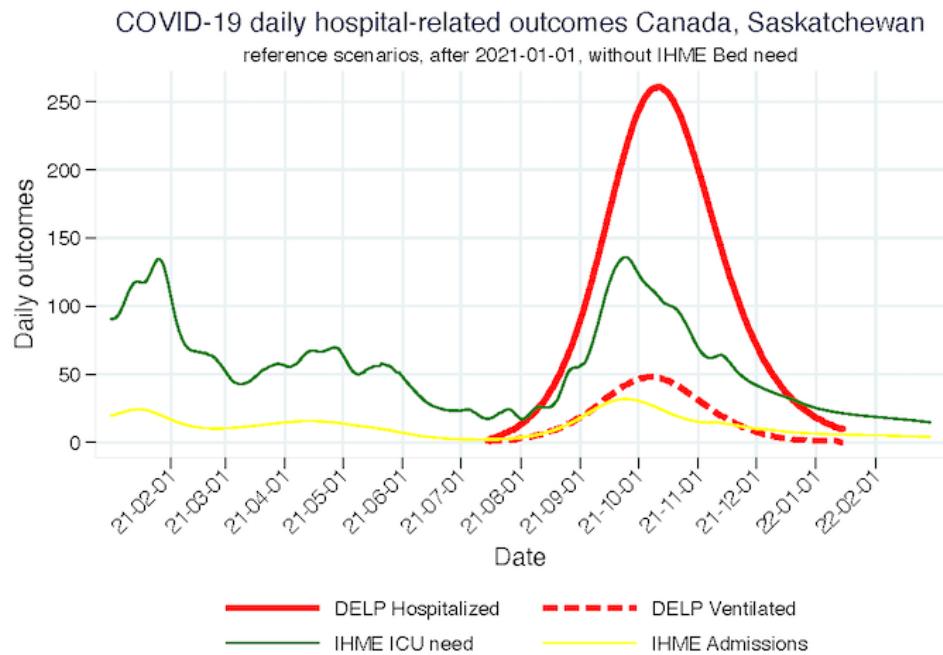

Better and worse scenarios: tight dot (||||) curves for IHME

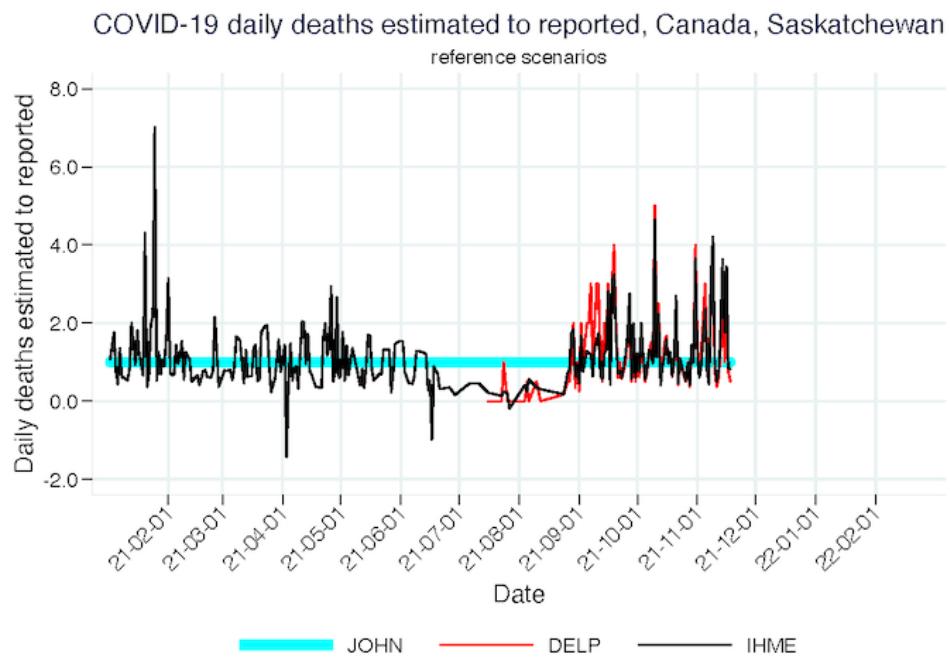

(7) Saskatchewan [Hospital-related outcomes, all time](#)

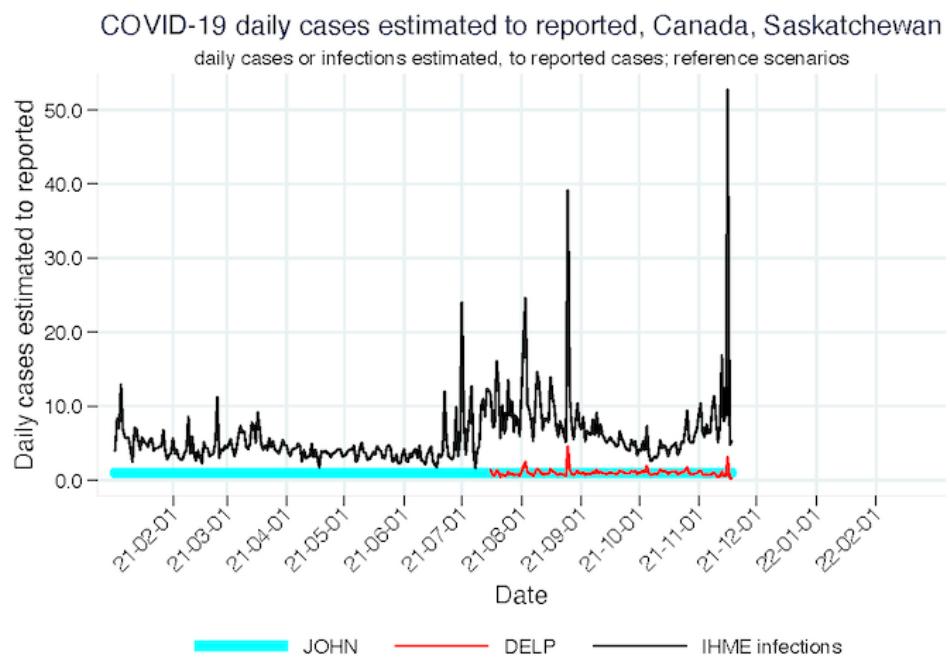

(8) Saskatchewan [Hospital-related outcomes, 2021, without IHME Bed need and IMPE Hospital demand](#)

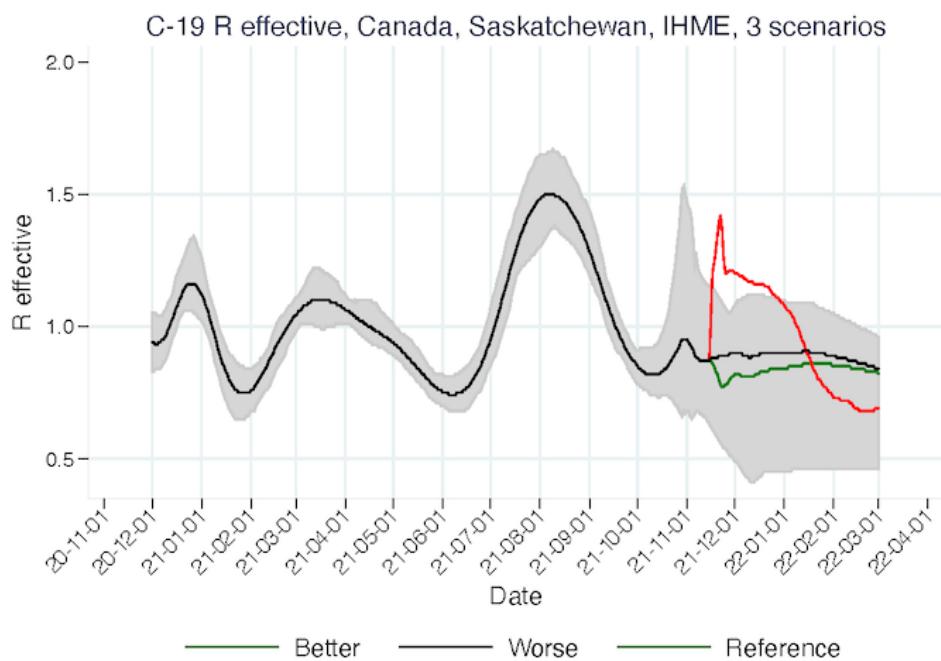

(9) Saskatchewan [Daily deaths estimated to reported, reference scenarios, 2021](#)

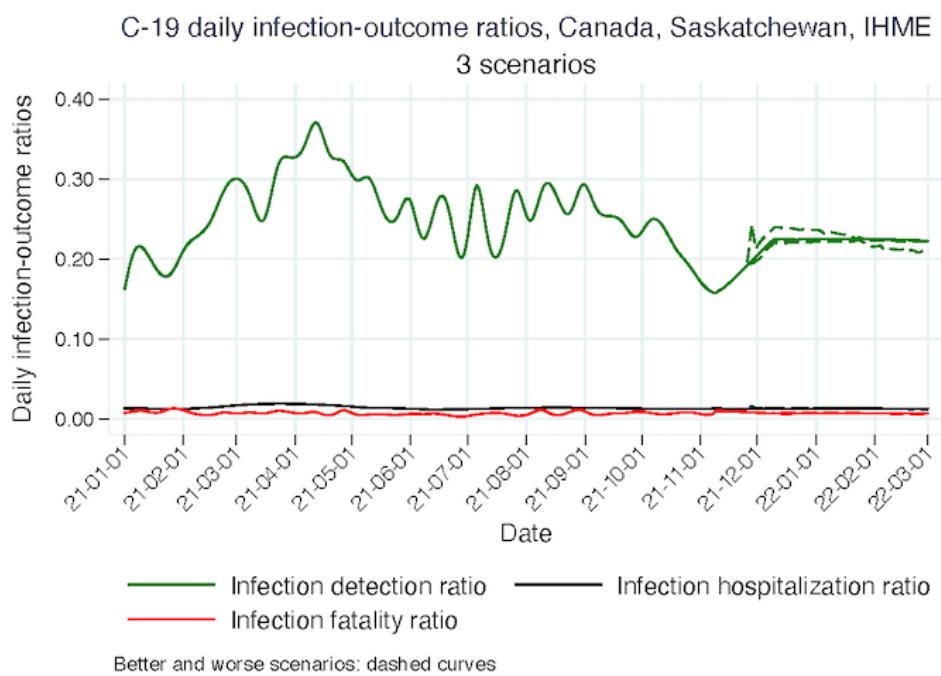

(10) Saskatchewan [Daily cases or infections estimated to reported, reference scenarios, 2021](#)

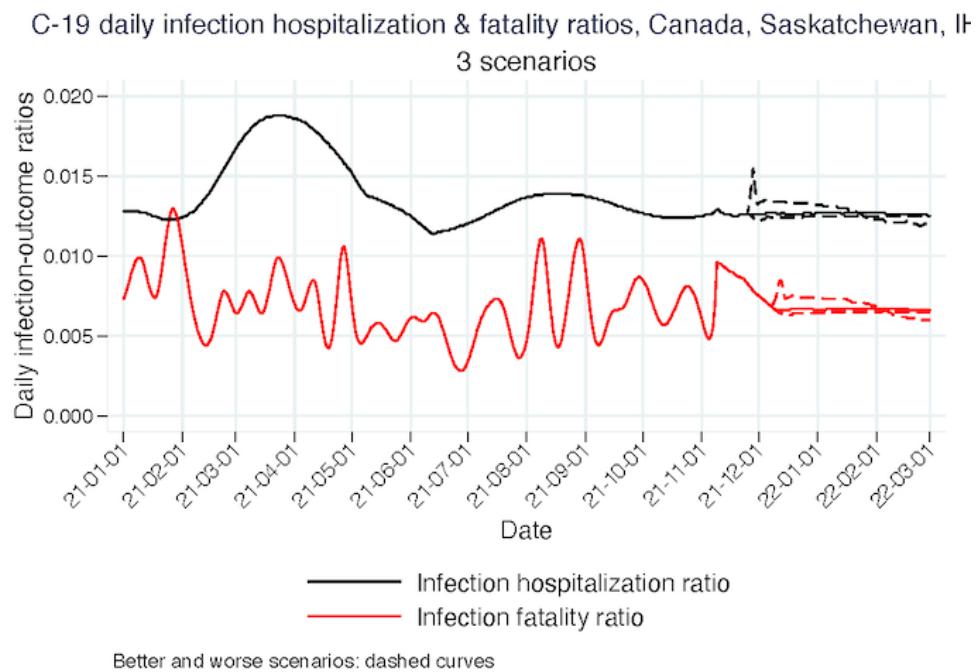

(11) Saskatchewan [R effective, 3 scenarios, IHME](#)

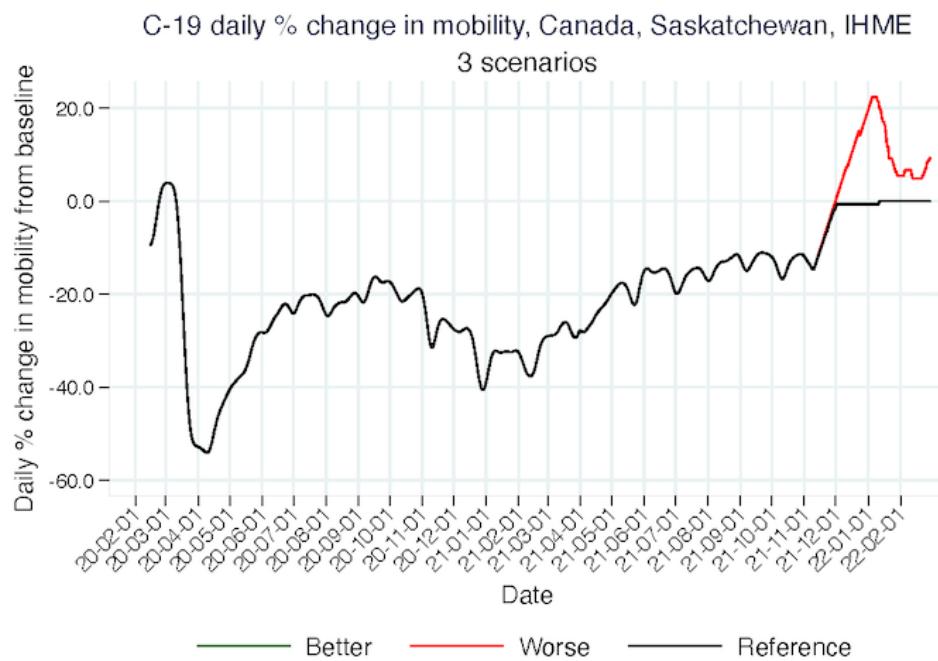

(12) Saskatchewan [Daily Infection-outcomes ratios, 3 scenarios, IHME, 2021](#)

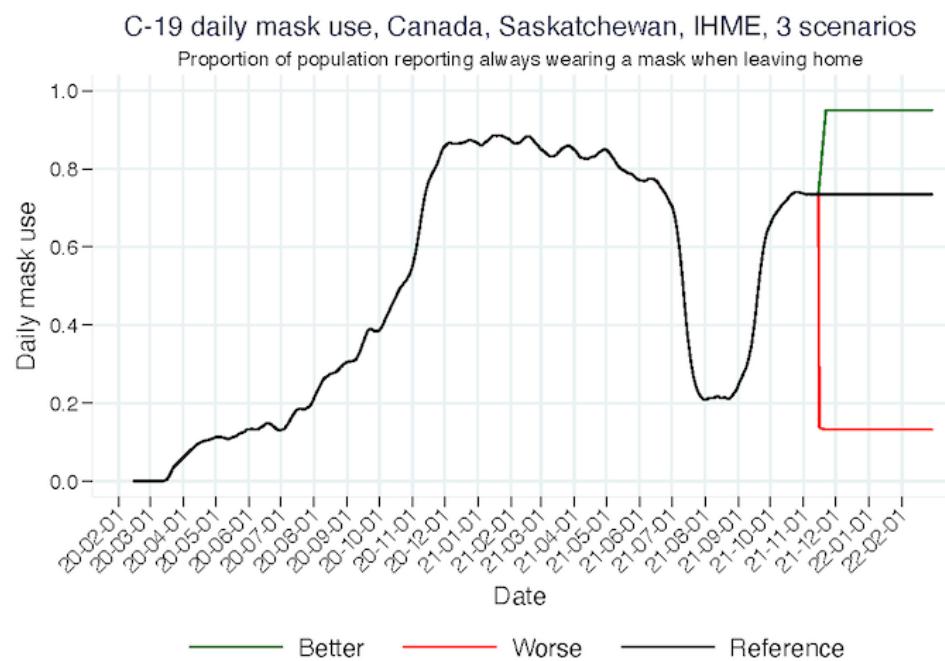

(12b) Saskatchewan [Daily infection hospitalization & fatality ratios, 3 scenarios, IHME, 2021](#)

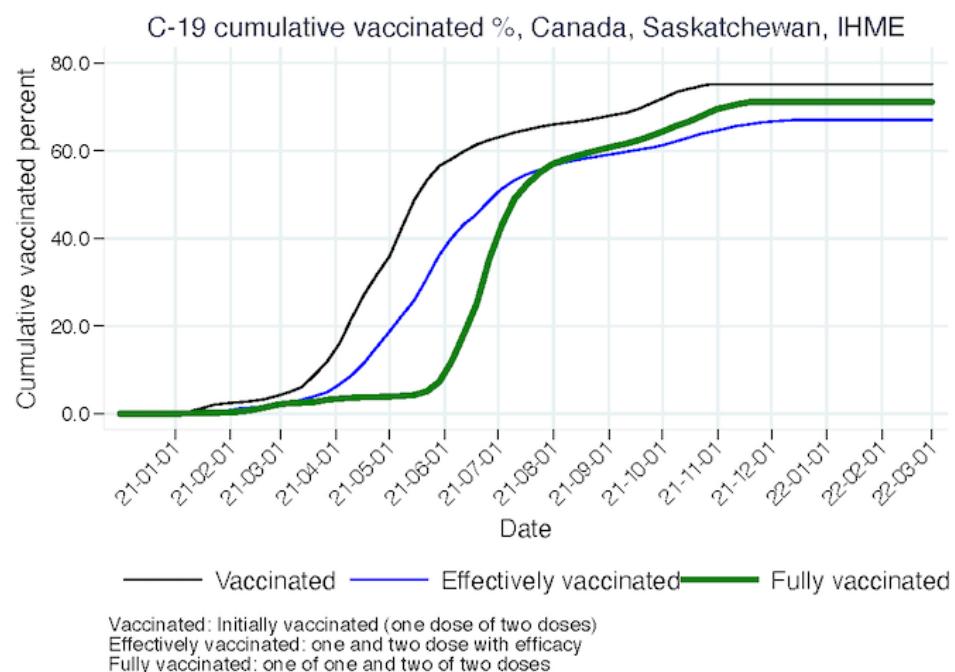

(13) Saskatchewan [Daily mobility, 3 scenarios, IHME](#)

(14) Saskatchewan [Daily mask use, 3 scenarios, IHME](#)

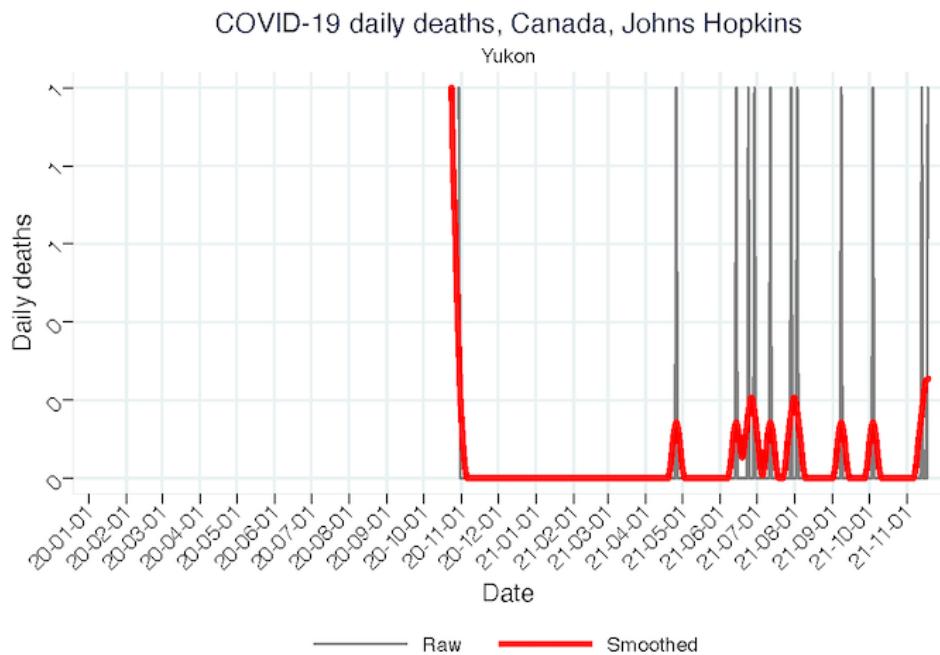

(15) Saskatchewan [Percent cumulative vaccinated, IHME](#)

## Selected graphs - Yukon

Yukon predicted by none of the models. Reports to WHO available.

### (1) Yukon [Daily deaths, reference scenarios, all time](#)

(2) Yukon [Daily cases, reference scenarios, all time](#)
